Contents

Introduction: There Is No Door Number Three	1
The pursuit of relentless growth has one underlying premise: You get better or you get worse. You can't stay the same. This book is for all companies that are tired of treading water.	
PART ONE: PREREQUISITES FOR RELENTLESS GROWTH	7
1. What Business Are You <i>Really</i> In?	9
Umpqua started to take off when we decided we were really in the retail business, not just the banking business, and started learning from successful retailers like Nordstrom. This chapter offers advice to help you discover what business you are really in.	
2. Never-Ending Discipline	23
Leaders need to realize that growth is not a project, not a quick fix. You must have the discipline to realize you never have it made.	
3. Have Positive Passion	30
Be relentless about your vision. Know what you stand for. We call ourselves The World's Greatest Bank. It helps us stand out with our customers, but more than that, it creates positive passion within the company.	
4. Snap the Rubber Band Syndrome	40
Each of us has a rubber band attached to our backside, connected to tradition. This chapter offers strategies to help people overcome the pull of comfortable routines.	
5. What's Going On Behind Your Back?	49
Having the right strategy is meaningless unless you can execute it flawlessly on the ground. This chapter explains	

how to put systems in place to inspect the execution of strategy at the lowest level.

PART TWO: ROLES OF A LEADER	57
6. Support Your People—and Hold 'Em Accountable	59
Leaders have many roles, but support and accountability are critical—and they go hand in hand.	
7. Give Them the Power	69
In the past, the leader was the guy with the answers. Today, you have to empower the people closest to the action to come up with their own answers.	
8. Rise Above the Battlefield	79
Leaders need to rise above the battlefield to achieve a strategic perspective on the company. I explain the tactics I use to get above the fray and—just as important—how I help the people on my executive team do this as well.	
9. Explain Your Movie	87
Leaders cannot delegate the job of explaining their vision for the company—what I call “this movie that’s playing in my head.”	
10. Be Real	94
If you can’t be yourself, you can’t lead. It’s as simple as that.	
PART THREE: MASTER THE BASICS	101
11. Sweat the Small Stuff	103
Every great company sweats the details. In this chapter, I talk about how great companies such as Disney sweat the small stuff.	
12. Who Do You Want on Your Bus?	109
In <i>Good to Great</i> , Jim Collins says that you’ve got to get the right people on the bus. I think that is exactly right. But who are the right people?	
13. Keep Your Board Strong—and Informed	118
Companies can’t move fast if the executive team has to drag the board of directors along with it. This chapter	

	describes how I work with my board to keep us all aligned and on track.	
14.	Intangibles Matter Most In a service business like ours, the most important metrics measure things that are intangible.	128
PART FOUR:	MARKETING, MARKETING, MARKETING	139
15.	Find the Revolution Before It Finds You Revolutions are going on all the time in consumer preferences, in technology, in marketing, and in other areas. We do a number of things at Umpqua to find these revolutions before they overwhelm us.	141
16.	Your Brand Is You People don't like faceless bureaucracies. They like real people, real personalities. We've achieved remarkable success by staying true to ourselves. Some people say we're corny, but it's who we are—and people respond.	150
17.	Serve the Customer This chapter details our Universal Associates program: every associate in our stores is trained to be able to handle any task a customer requires. This sharply sets us apart from our competition. What are you doing to set yourself apart?	158
18.	Put Design into Everything You Do Design encompasses much more than just the physical layout of stores or products. When design is used effectively, it brings every aspect of your business into alignment so that everything reinforces and supports everything else.	165
PART FIVE:	LEADING YOUR CULTURE	173
19.	Be There Maintaining a culture is like raising a teenager. You're constantly checking in. "What are you doing? Where are you going? Who are you hanging out with?"	175
20.	Keep Your Balance Leading for growth is a high-wire act—and there are many dimensions to keeping your balance.	184

21. Remember Who You Are	193
The biggest danger of relentless growth is that your very growth will undermine the qualities that produced that growth in the first place. You've also got to know what not to change—what to maintain if you want to stay on track.	
22. Mergers and Acquisitions Done Right	201
A lot of Umpqua's growth has come from acquisitions, which have the potential to disrupt or dilute the acquiring company's culture. We have not allowed that to happen.	
Conclusion: Making Relentless Progress	211
The key to growth is making progress every single day.

LEADING FOR GROWTH

Introduction

There Is No Door Number Three

When I hear a business leader say, “We want to stay right where we are—we don’t need to change,” I’ll sell my stock in that company right away. Companies can never stay the same. Leading for growth is not optional.

The simple fact is, you get better or you get worse. You cannot stay the same. There is no Door Number Three. Here’s why. Suppose I row you out into a lake and tell you to jump in. I tell you to tread water. Then I tell you I’ll be back in three days. When I come back, are you still treading water? No, either you swam back to shore, improving your situation, or you were stupid enough to drown. I guarantee you, you won’t have stayed the same, treading water.

It’s the same with business. Businesses that want to stay the same are trying to tread water indefinitely. And it doesn’t work. Too many outside pressures and internal issues are going to create change, like it or not. I don’t care if you’re selling tires, insurance, consulting services, or furniture. Your company is going to change for better or worse. As a leader, you have to decide, “Are we going to get better (Door Number One) or get worse (Door Number Two)?”

Not much of a choice, is it?

Leading for growth isn’t necessarily about getting bigger just to be bigger. It’s about getting better, stronger, more agile, more customer focused, and becoming a relentless competitor. And companies that do that do get bigger—but it’s a result, not an objective.

I'll admit, sometimes growing your business requires little more than a steady hand at the helm—companies in all sectors prospered in the boom years of the 1990s, for example. But what do you do when the tide isn't rising, when it may even be going out?

The boom years are long gone, yet a few companies continue to thrive, gaining market share day after day, month after month, year after year. Some of these companies are in brand-new growth industries, such as eBay and Google. But others are in industries that could hardly be classified as new or growing: retailing, manufacturing, and the like. Southwest Airlines is one such company. Another is the company I lead, which may be unknown to you if you don't live in the Pacific Northwest. It's called Umpqua Bank—and it has grown relentlessly over the past twelve years, going from \$140 million in assets in 1994 to more than \$7 billion today.

When I took the helm in 1994 as CEO of South Umpqua State Bank, as it was then known, it was a closely held company that employed sixty people in a rural, economically depressed region of Oregon. An hour and a half plane ride down the coast was Silicon Valley, just beginning the tremendous boom that would create millionaires by the score before petering out in the first year of the new century. They had computer chips and biotech and venture capitalists crawling all over the place. We had none of that. We had the timber industry and the Spotted Owl. Talk about a lack of synergy! And yet we grew our company.

Today Umpqua Holdings is a publicly traded company that employs eighteen hundred people throughout Oregon, Washington, and northern California—and has been featured in numerous financial industry publications as well as *Fast Company*, *BusinessWeek*, and on CNBC. The writers of these articles sometimes call us “quirky” or “cool”; almost all comment on our unique culture and how it has propelled our growth. They describe how one small company broke away from the pack of its more traditional rivals to create growing value for shareholders, customers, and employees.

Leading for Growth offers real-life lessons from my experiences in leading Umpqua on a journey of transformation that took it on a path of consistent growth year after year. This book is not intended to tell Umpqua's story. The strategies and methods I used had little to do with our particular financial services industry and

everything to do with understanding how to motivate people, create a competitive advantage, ensure flawless execution, and meet the other challenges every business leader faces. I also bring in lessons that I have learned from companies I admire, such as Ritz-Carlton and Nordstrom for customer service and Nike and Apple Computer for marketing and design. This book offers practical, straightforward advice for all businesses on understanding the competitive landscape they face and on building and leading a great culture that generates relentless growth.

Do you have employees? Do you have customers? Do you want to lead the first group in ways that create more and more of the second? This book is for you.

What This Book Offers

With this book, I set out to offer a fresh look at how leaders can steer their companies to long-term success. Companies with consistent growth records understand their markets very well, execute their strategies precisely, consistently manage change, stay agile, and develop the discipline to maintain course.

This book will show you how to

- Discover what business you are really in and create your competitive advantage.
- Build an organization with committed and enthusiastic employees.
- Connect marketing strategy and execution on the ground.
- Create learning opportunities for all managers and staff.
- Fight “the rubber band syndrome” that often pulls people back into old routines.
- Rise above the day-to-day battlefield to achieve a strategic perspective on your company and where it is going.
- Stay agile by keeping the board informed and strategically aligned.
- Manage mergers and acquisitions in ways that support rather than dilute the culture.

Throughout, I emphasize what you can and should do personally in your leadership role. For example, I explain why you

have to understand the real nature of change (it's not a process but a journey) and describe how you can protect yourself from conventional wisdom, which can endanger leadership (don't worry about being called unreasonable, for example).

This book will offer plain talk and useful advice based on Umpqua's actual experience. I have written it for all business leaders who want to grow their companies. I hope it will be especially attractive to those looking for something beyond the conventional wisdom—who are ready to look at leadership in a new way.

Overview of Contents

The first part of the book, “Prerequisites for Relentless Growth,” explains the elements I believe you have to put in place before you can hope to grow your company. As a leader, it is your job to (1) cut through conventional wisdom and understand what business you are really in, (2) develop your own discipline and instill discipline in your company, (3) generate the positive passion that comes from a clear vision of your future, (4) create an atmosphere that propels people to embrace change, and (5) ensure that strategy and execution mesh on the ground. I devote a chapter to meeting each of these challenges.

Many factors go into taking a company on a path of sustained and relentless growth. It takes innovative product development, savvy marketing, strong execution, and much, much more. Many of these responsibilities can be delegated—but some cannot. Part Two, “Roles of a Leader,” describes the essentials that a leader cannot delegate, the critical aspects of leading and managing that have to start at the top if they are to start anywhere. These critical roles include supporting your people, holding them accountable, empowering them, helping them gain perspective, and explaining the big picture to them. Moreover, all of these roles require you to be yourself as a leader.

There is no rocket science in Part Three, “Master the Basics,” just commonsense nuts and bolts—but too often these basics get short shrift in books on leadership. You cannot transform your company if you aren't very good at getting the small stuff right. In this section of the book, I explain why you've got to sweat the small details—and offer advice on getting the right people on your bus,

working with your board so that it helps propel growth rather than block it, and putting systems in place to measure intangibles such as quality service.

I've read a number of books on leadership and none of them had much to say about marketing. I don't think you can be very successful in leading your company on a path of growth if you don't pay a lot of attention to the market you serve. As HP cofounder Dave Packard used to say, "Marketing is far too important to be left to the Marketing Department." In Part Four, "Marketing, Marketing, Marketing," I look at the key roles of the leader in ensuring that the company understands the realities of the marketplace, where revolutions often occur. I also talk about branding, customer relations, and the critical importance of design in today's marketplace. When design is used effectively, it brings every aspect of your business into alignment so that everything reinforces and supports everything else.

A Note on Motivational Moments

One of the things that I talk about in this book is the importance of having fun at work. At Umpqua we start every day with a motivational moment—a brief group activity (five minutes or less) that promotes fun and teamwork and often teaches key lessons or provokes fresh ways to look at our business. Every department or team in the company is free to choose what to do for its motivational moments. I have included an actual motivational moment at the end of every chapter that relates to the topic of the chapter. I hope you find them *fun* and interesting and that they provoke new ways for you to think about how you can lead for growth.

The final section of the book is perhaps the most important to your long-term success in growing your company. The biggest danger of relentless growth is that growth itself can undermine the qualities that made you grow in the first place. You can fight this tendency by maintaining a strong culture. In Part Five, "Leading

Your Culture,” I examine why culture is so important and explain how leaders can keep their culture on track, even as growth threatens to stretch core cultural values out of shape. Keeping your balance, holding on to your identity, and being very careful with mergers and acquisitions are critical to maintaining a strong culture. The Conclusion details critical leadership lessons on growth.

Come Along for the Ride

I hope the insights and lessons I offer will be useful to you as you take our experience and creatively apply it to help your business break away from the pack—and create a higher level of excitement for you as you explore new ways to lead for growth. Perhaps, like me, you will feel your heart beat just a little bit faster with anticipation at discovering an idea that can make a real difference in strengthening your business.

You can’t grow your business without making it better, changing it in ways large and small. If you want a book that tells you how to keep your business healthy while leaving it unchanged, this isn’t the book for you. If you want a book that offers guidance on doing what it takes to grow your business day after day, year after year, and have fun doing it, then I hope you’ll come along for the ride. Remember, there is no Door Number Three.

Part One

Prerequisites for Relentless Growth

Many ingredients are needed to take a company on a path of sustained and relentless growth. It takes talented people, strong marketing, precise execution, the right metrics, and much, much more. I'll give you my take on these growth ingredients later on in this book. My view is that all these factors don't matter a whole lot without strong, effective leadership. So that's what I am going to focus on first.

Leading for Growth Starts with You

If you are leading a company large or small, or a profit center in a larger company, you need to realize that it all starts with you. It doesn't all depend on you. (Only an egomaniac would think the company's success all depends on him or her.) But make no mistake, as a leader, it all starts with you. That's why I call this section of the book *prerequisites* for relentless growth.

If you don't have what it takes, if you don't focus on the right things in the right way, then I don't care what great business plan

you have or how big your line of credit is, you are probably going to stumble somewhere along the way.

What are the leadership prerequisites that you need to master? I think they boil down to five key essentials:

- You have to cut through conventional wisdom and figure out what business you are really in.
- You must develop the self-discipline to stay true to your plan in the face of conventional wisdom and other obstacles.
- You need to generate the positive passion that comes from a clear vision of your future.
- You must make it clear to your people that you are personally involved in leading them through the changes ahead.
- You have to develop the ability to find out what's going on behind your back to ensure your strategies' being implemented effectively on the ground.

These five key responsibilities belong to you as a leader. They cannot be delegated. That is why I say it all starts with you.

Chapter 1

What Business Are You *Really* In?

Industry publications write about Umpqua a lot. And they usually say nice things, remarking on our strong growth, our return to shareholders, our reputation for being cool and quirky, and our unique organizational culture. But these articles almost always insert a comment that irks me. No matter how positive the article is, it almost always says something like, “Umpqua Bank calls its branches ‘stores,’” as if the word *store* is a gimmick. They humor us by putting *store* in quotation marks, as if real grown-up bankers wouldn’t be so silly as to call their branches that. But it’s not a gimmick. It’s part of who we are and how we see our business. They don’t understand that it’s a huge, even dinosaur-sized, part of the reason they are writing about us in the first place! It’s part of our unique culture that they extol.

Why do we call our facilities *stores* rather than *branches*? Because we understand what business we are really in. We’re in the retail service business, which to us means we sell banking products and services to the public in our stores. In this chapter, I explain exactly what I mean by that and why it is so important for you to understand what business you are really in.

Business Not as Usual

It is too easy to look at your company and say, “we’re in the banking business.” (Or in the tire business or the computer business.) You will never break free of the hold of conventional wisdom with that kind of thinking. And if you can’t break free of conventional

wisdom, you'll never break out of the pack—you'll never create a competitive edge that separates you from your competitors.

To illustrate how a lack of understanding of what business you are really in can do to you, just consider Steve Jobs and Apple Computer.

Back in the early 1980s Jobs thought that his company was in the computer business, specifically the computer hardware business, and that it could prosper by selling better computers than its competitors. And for a while, that worked. Then IBM entered the picture, along with its then-partner Microsoft. In 1984, Apple tried to jump ahead by introducing the first point-and-click operating system with its revolutionary new line of Macintosh computers—a great leap forward that was much easier to use than Microsoft's cumbersome DOS system. But unfortunately, Jobs never realized that the business was changing and that he was now competing in the software business. He and his successor John Sculley kept the Mac operating system proprietary and used it only as a way to sell Apple's hardware.

Apple thought it was competing against IBM, Compaq, and the other PC clones when it was really competing against Microsoft. When Microsoft copied the look and feel of the Macintosh system with Windows—and sold it to every comer—Apple's goose was cooked. Of course, Apple faced many hurdles—who knows what might have happened if Jobs hadn't been forced from the company? But it's my firm opinion that if Jobs had understood early on that he was really in the software business, we probably wouldn't know Bill Gates as the world's richest man.

So understanding what business you are really in is absolutely critical to success.

"Okay," you might say, "that's an extreme example from the early days of a revolutionary new industry that was growing exponentially and whose landscape was changing daily. I'm in a mature industry that's growing slowly, even in good years. How does that apply to me?"

Well, it applies to you in spades! And Umpqua is living proof. After all, banking is a mature business if there ever was one—banks have been around for hundreds of years! Walk around any city, any small town, and you'll see a dozen banks in a few blocks. And don't talk to me about growth! When we started to reinvent Umpqua Bank
