Wrox Programmer to Programmer™

Professional SharePoint® 2010 Development

Tom Rizzo, Reza Alirezaei, Paul J. Swider, Scot Hillier, Jeff Fried, Kenneth Schaefer

CONTENTS

INTRODUCTION

CHAPTER 1: INTRODUCTION TO SHAREPOINT 2010

What's New in the SharePoint Platform and Tools

- Language Integrated Query (LINQ)
- List Enhancements
- Business Connectivity Services
- Silverlight Integration
- Client-Side OM
- Web 2.0 Protocols and New Standards
- Sandbox Solutions and Resource Governors
- SharePoint Designer
- Visio and Access Services
- InfoPath (Forms, List Forms, Mobile Forms)
- Visual Studio
- Web Solution Packages
- Developer Dashboard

What's New in Collaboration/Social Computing

- Enhanced Blogs and Wikis
- Social Tagging and Ratings
- Activity Feeds
- Social Bookmarking
- Organization Browser
- Outlook Social Newsfeeds and Expertise
- Microblogging and Mobile Client
- Social Search

What's New in Search

- New Core Search Query Capabilities
- Enhanced Core Search Results
- Enhanced People Search: Phonetics
- Enhanced People Search: Address Book Style Lookups
- Enhanced People Search Results
- New Search Connector Framework
- FAST Integration

What's New in ECM

- What's New in ECM: Document Management
- What's New in ECM: Records Management
- What's New in ECM: Web Content Management
- What's New in ECM: Digital Asset Management
- What's New in ECM: Workflow
- What's New in Forms
- What's New in Groove (SharePoint Workspace)

Summary

CHAPTER 2: DEVELOPER TOOLS FOR SHAREPOINT 2010

OOB Developer Experience

SharePoint Designer

- New User Interface
- Top Ten New Features in SPD

Visual Studio 2010

- Importing WSPs
- SharePoint Server Explorer
- Solution Explorer Integration
- Feature Designer
- Package Designer and Packaging Explorer

Project Type Templates

Mapping Folders

Setting Up Your Development Environment

System Requirements

Troubleshooting with Debugging, and Testing

F5 Debugging

Debugging Using the Dev Dashboard

Debugging Using SharePoint Logs

Debugging Silverlight Code

Unit, Capacity, and Load Testing

Other Useful Tools for Debugging and Testing

Deploying and Maintaining Your Code

Customizing Deployment in VS

ALM with VS 2010 and SharePoint

Moving from Test to Production

Upgrading Code from 2007

Summary

CHAPTER 3: IT PRO ENHANCEMENTS FOR THE DEVELOPER

Performance Improvements

List Throttling

External List Throttling

HTTP Request Throttling

Remote Blob Storage

Streaming Media and Bit Rate Throttling

High Availability Improvements

Database Mirroring and Clustering

Read-Only Databases

Security Improvements

Claims-Based Authentication

Code Access Security

Sandbox Solutions

Cross-Site Scripting

Management Improvements

Health Monitoring and Reports

Service Applications

PowerShell Support

Summary

CHAPTER 4: SHAREPOINT PLATFORM

Platform Overview

New User Interface

General Platform Improvements

Master Pages and _Layouts

The Ribbon

Status Bar and Notification Area

Working with Dialogs

Theming Infrastructure

List, View, and Event Enhancements

List Enhancements

View Enhancements

Events Enhancements

New Events

New Event Registration Feature

Post-Synchronous Events

Custom Error Pages

Impersonation Enhancements

Overview of Data Technologies

SharePoint LINQ Support

Managed Client OM

Sandbox Solutions

Types of Solutions You Can Build

Executing Code in the Sandbox

Solution Monitoring

Managing Solutions

Summary

CHAPTER 5: COLLABORATION AND SOCIAL COMPUTING

People-Centricity

User Profile Service Application

Profile Synchronization

Social Networking and My Site

Social Tagging and Ratings

Blogs and Wiki Site Definitions

Summary

CHAPTER 6: SEARCH

Search Options with SharePoint 2010

SharePoint Foundation

Search Server 2010 Express

Search Server 2010

SharePoint Server 2010

FAST Search Server 2010 for SharePoint

Choosing the Right Search Product

Common Platform and APIs

Search User Experience

Search Center

“Conversational” Search

People Search

Search Architecture and Topologies

SharePoint Search Key Components

FAST Architecture and Topology

Scale-Out with FAST

How Architecture Meets Applications

Developing with Enterprise Search

Range of Customization

Top Customization Scenarios

Search-Driven Applications

Customizing the Search User Experience

Example: New Core Results Web Part

Example: Adding Sorting to Your New Web Part

Web Parts with FAST

Search Connectors and Searching LOB Systems

New Connector Framework Features

Creating Indexing Connectors

FAST-Specific Indexing Connectors

Customizing Connectivity in Summary

Working with Federation

Customization Examples Using Federation

Further Considerations in Federation

Working with the Query OM

Query-Side APIs and OMs

Query Syntax

FAST Query Language (FQL)

Examples Using Query Customization

Social Search

End-User-Visible Functionality

Social Search Architecture and Operations

Content Enhancement

Metadata, Linguistics, and Search

Advanced Content Processing with FAST

Multilingual Search

Extending Search Using the Administrative OM

Authentication and Security

Search Reports

Summary: Customizing Search with SharePoint 2010

CHAPTER 7: ECM: RECORDS MANAGEMENT

SharePoint 2010 Records Management Overview

Recordization

eDiscovery and Holds

Auditing and Reporting

Programming RM in SharePoint

Declaring and Undeclaring a Record

Creating Retention Schedules

Creating Organizer Rules

Creating Workflows That Use RM

Summary

CHAPTER 8: WEB CONTENT MANAGEMENT

The Content Lifecycle in Web Content Management

Separation of Content and Development

The Important Role of Information Architecture

Foundations of Web Content Management

Page Processing Model

Site Columns

Content Types

Page Layouts
Master Pages
Navigation
Content by Query Web Part
Content Conversion

Summary

CHAPTER 9: ELECTRONIC FORMS

Introducing the Training Management Application

Customizing SharePoint List Forms

Creating the Trainings List
Customizing SharePoint List Forms
Adding Intelligence Using Rules and Views
Publishing List Forms
Distributing the Trainings List

Designing InfoPath Form Templates

What Is a Form Library?
Designing Your Form Template
Querying SharePoint Lists in Forms
Querying REST Web Services
Submit Behavior
Form Programming
Publishing an InfoPath Form
Publishing to a Form Library vs. Publishing to a Content Type
Form Security
Sandboxing Your Forms
Form Anatomy
Extracting the Form's Data

Tools for Form Developers

The Rule Inspector
The Design Checker
IE Developer Tools
Fiddler Tool
Tiny Inline Tools

Building Web Parts Using InfoPath

InfoPath Form Web Part
Using InfoPath to Create Connected Web Parts
Getting Data from Other Web Parts
Empowering Users with Mashups

Summary

CHAPTER 10: ECM: DOCUMENT MANAGEMENT

A New Enterprise Content Mindset

New ECM Features
Expanded ECM Object Model

Getting the Most Out of the Document Center

Visual Studio and the Document Center

Content Routing

Managing the Content Organizer

Using Document Libraries in the Document Center

Metadata Navigation and Filtering
Visual Studio and Document Libraries

Managed Metadata

Types of Metadata
Managed Metadata Service Application

Content Types

Document ID Service

Create a Custom Document ID Provider

Summary

CHAPTER 11: BUSINESS CONNECTIVITY SERVICES

Introducing Business Connectivity Services

Creating Simple BCS Solutions

Understanding BCS Architecture

Understanding Connectors

Understanding Business Data Connectivity

Understanding the Secure Store Service

Understanding Package Deployment

Understanding Authentication Scenarios

Configuring Authentication Models

Accessing Claims-Based Systems

Accessing Token-Based Systems

Managing Client Authentication

Managing Authorization

Creating External Content Types

Creating Operations

Creating Relationships

Defining Filters

Using ECTs in SharePoint 2010

Creating Custom Forms

Using External Columns

Business Data Parts

Creating a Profile Page

Searching External Systems

Supplementing User Profiles

Using ECTs in Office 2010

Using the SharePoint Workspace

Understanding Outlook Integration

Using Word Quick Parts

Creating Custom BCS Solutions

Using the Runtime Object Model

Using the Administration Object Model

Creating .NET Assembly Connectors

Summary

CHAPTER 12: WORKFLOW

Training Approval Workflow

Creating the Training Content Type

Workflow Development Lifecycle

Prototyping in Visio

Customizing the Workflow in SharePoint Designer

Creating Custom Actions with Visual Studio 2010

Importing to Visual Studio 2010

Building Workflows with Visual Studio 2010

Site Workflows

Pluggable Workflow Services

Tapping into Workflow Events

Summary

CHAPTER 13: BUSINESS INTELLIGENCE

Challenges with Traditional Business Intelligence

Integration with SharePoint: The History

Highlights of Business Intelligence in SharePoint Server 2010

Important Terms and Concepts

Using the Adventure Works Sample Databases

The Starting Point: Business Intelligence Center

Excel Services

Excel Services Architecture

Office Data Connection

Authoring Workbooks in Excel

Publishing the Workbook

PerformancePoint Services

Dashboard vs. Scorecard

I would like to dedicate this book to S. Khatoon. Thank you for being the love of my life, my best friend, and my family!

—REZA ALIREZAEI

ABOUT THE AUTHORS

TOM RIZZO is a senior director in the SharePoint team at Microsoft. This is Tom's second stint with SharePoint having worked in the SharePoint and Exchange Server teams back in the SharePoint 2001 timeframe. Before working in SharePoint, Tom worked in the SQL Server team and also as a technical specialist in the Microsoft field organization, where he evaluated and deployed Microsoft technologies for the United States Department of Defense. You can reach Tom, who authored chapters 1 through 4, 7, 14, and Appendix A, at thomriz@microsoft.com.

REZA ALIREZAEI is an independent consultant and a five-time recipient of Microsoft's Most Valuable Professional (MVP) award for Microsoft SharePoint Portal Server & Microsoft Office SharePoint Server. He is focused on designing and implementing enterprise solutions for SharePoint, related .Net technologies, and Microsoft Business Intelligence stack. Reza can be reached at reza@devhorizon.com.

PAUL J. SWIDER is a freelance consultant and the Enterprise SharePoint Strategist for OnClick Solutions. In addition, he is President of the Charleston SharePoint Users Group and an accomplished entrepreneur. Paul has trained and consulted thousands of SharePoint administrators, developers, and architects. In addition, he writes and teaches about enterprise collaboration concepts with demonstrated knowledge you can only get in “the trenches.” His specialties include enterprise information architecture, SharePoint development patterns, and social media integration. When not working, Paul enjoys sailing and snowboarding. He wrote chapters 5 and 10.

SCOT HILLIER is an independent consultant and Microsoft SharePoint Most Valuable Professional focused on creating solutions for Information Workers with SharePoint, Office, and related .NET technologies. He is the author/coauthor of 12 books on Microsoft technologies including “Inside SharePoint 2010.” Scot splits his time between consulting on SharePoint projects and training for Critical Path Training (www.criticalpathtraining.com). Scot is a former U. S. Navy submarine officer and graduate of the Virginia Military Institute. Scot authored chapter 11 and can be reached at scot@shillier.com.

JEFF FRIED is a senior product manager at Microsoft, specializing in strategic applications of search

technology. Jeff is a frequent speaker and writer in the industry, holds 15 patents, has authored more than 50 technical papers, and has led the creation of pioneering offerings in next generation search engines, networks, and contact centers. He wrote chapter 6.

KENNETH SCHAEFER is an independent developer and designer focusing on SharePoint and web-based solutions. Ken lives in the Chicago area with his daughter, Alexa. Ken, who authored chapter 8, can be reached at ken@kenschaefer.name.

ABOUT THE TECHNICAL EDITORS

MATT RANLETT, a SQL Server MVP, has been a fixture of the Atlanta .NET developer community for many years. A founding member of the Atlanta Dot Net Regular Guys (www.devcow.com), Matt has formed and leads several area user groups. Despite spending dozens of hours after work on local and national community activities such as the SharePoint 1, 2, 3! series (www.sharepoint123.com), organizing three Atlanta Code Camps, working on the INETA Board of Directors as the Vice President of Technology, and appearing in several Pod Casts such as .Net Rocks and the ASP.Net Pod Cast, Matt recently found the time to get married to a wonderful woman named Kim, who he helps to raise three monstrous dogs. Matt currently works as a Senior Consultant with Intellinet and is part of the team committed to helping people succeed by delivering innovative solutions that create business value.

KANWAL KHIPPLE is an independent consultant and Microsoft SharePoint MVP working with enterprise clients in America and Canada. Kanwal strives to build SharePoint solutions that make life easier for Information Workers. His passion lies with Information Architecture, Governance, Business Process Automation, and Branding. Kanwal is an integral part

of the global SharePoint Community, contributing through his blog www.sharepointbuzz.com. He can be reached at kanwal@khipple.com.

ACKNOWLEDGMENTS

I WOULD LIKE TO THANK Spencer Harbar and Robert Bogue who answered some of my technical questions during the process of writing my chapters. I also want to thank those at Microsoft who provided their kind support: Chris Keyser, Arpan Shah and Pej Javaheri. And, a special thanks goes to Vahid Haeri, a close friend who always made sure that I had access to my testing farms with the latest bits installed.

—REZA ALIREZEAI

INTRODUCTION

THIS BOOK IS FOR ANYONE INTERESTED in developing applications on top of SharePoint 2010. While some knowledge is assumed about SharePoint, readers will find the examples comprehensive and easy to follow if they have previous knowledge of web development and development tools.

WHAT THIS BOOK COVERS

SharePoint 2010 is a big product and this book is a big, diverse book. So, before you dive into the book, we wanted to give you a little feel for what each chapter entails and what you can expect once you have read the chapter.

Introductory Chapters

The first couple of chapters provide an introduction to SharePoint 2010, since the 2010 release is a large release across all the many SharePoint workloads. In these chapters, you will develop an understanding of the features that 2010 provides, from creating collaboration sites to managing your content.

From there, you will explore the new developer tools in Visual Studio 2010 for SharePoint. With the 2010 release of Visual Studio, Microsoft has invested in making Visual Studio a first-class SharePoint development tool with new

development, debugging, and testing tools targeted specifically at SharePoint 2010.

Finally, you will see the IT professional improvements for developers. These improvements make deploying and debugging with your IT counterparts faster and easier.

Platform Services

The next section of the book is about the base platform services and APIs provided by SharePoint. This is a big section since SharePoint is a big product with a lot of platform services. This section also serves as a basis for the rest of the book when it comes to the APIs and protocols that you will use to develop with SharePoint.

Workload Chapters

The majority of the book focuses on the workload services and platform provided by SharePoint. This includes social networking, content management, search, forms, and business intelligence. This section of the book is where you can learn to build applications that extend the built-in workloads of SharePoint and shape them to perform the functionality you need to solve your business problems.

Online Services

The last section introduces you to moving your applications to Microsoft's cloud services called Microsoft Online Services. Through these cloud services, specifically Microsoft SharePoint Online, you can start hosting and sharing your application in the cloud with either coworkers or business partners without having to run the IT infrastructure yourself.

HOW THIS BOOK IS STRUCTURED

This book is structured to build logically on the skills you learn as you progress through it. After the initial introduction and base platform chapters, the book moves into the more advanced part of the platform. Each chapter builds on knowledge acquired from earlier in the book, so you will want to read through the chapters in succession or at the very least read the introduction and platform chapters before reading later chapters in the book.

WHAT YOU NEED TO USE THIS BOOK

First, you will need a copy of SharePoint 2010. The book is written to the public beta of SharePoint 2010, so you will want to download the beta. We have done our best to also test against the released version of SharePoint, so please check the WROX site regularly to see if there are updated code samples available.

Besides SharePoint 2010, you will need Visual Studio 2010 and Office 2010. The easiest way to get all these products is to download the pre-build virtual machine, which includes these products that Microsoft will release after the RTM of SharePoint 2010.

CONVENTIONS

To help you get the most from the text and keep track of what's happening, we've used a number of conventions throughout the book.

Boxes like this one hold important, not-to-be forgotten information that is directly relevant to
