SUCCESSION OF COLONELS

APPENDIX.

PREFACE.

[Table of Contents](#)

The character and credit of the British Army must chiefly depend upon the zeal and ardour by which all who enter into its service are animated, and consequently it is of the highest importance that any measure calculated to excite the spirit of emulation, by which alone great and gallant actions are achieved, should be adopted.

Nothing can more fully tend to the accomplishment of this desirable object than a full display of the noble deeds with which the Military History of our country abounds. To hold forth these bright examples to the imitation of the youthful soldier, and thus to incite him to emulate the meritorious conduct of those who have preceded him in their honorable career, are among the motives that have given rise to the present publication.

The operations of the British Troops are, indeed, announced in the "London Gazette," from whence they are transferred into the public prints: the achievements of our armies are thus made known at the time of their occurrence, and receive the tribute of praise and admiration to which they are entitled. On extraordinary occasions, the Houses of Parliament have been in the habit of conferring on the Commanders, and the Officers and Troops acting under their orders, expressions of approbation and of thanks for their skill and bravery, and these testimonials, confirmed by the high honour of their Sovereign's approbation, constitute the reward which the soldier most highly prizes.

It has not, however, until late years, been the practice (which appears to have long prevailed in some of the Continental armies) for British Regiments to keep regular records of their services and achievements. Hence some difficulty has been experienced in obtaining, particularly from the old Regiments, an authentic account of their origin and subsequent services.

This defect will now be remedied, in consequence of His Majesty having been pleased to command that every Regiment shall, in future, keep a full and ample record of its services at home and abroad.

From the materials thus collected, the country will henceforth derive information as to the difficulties and privations which chequer the career of those who embrace the military profession. In Great Britain, where so large a number of persons are devoted to the active concerns of agriculture, manufactures, and commerce, and where these pursuits have, for so long a period, been undisturbed by the *presence of war*, which few other countries have escaped, comparatively little is known of the vicissitudes of active service and of the casualties of climate, to which, even during peace, the British Troops are exposed in every part of the globe, with little or no interval of repose.

In their tranquil enjoyment of the blessings which the country derives from the industry and the enterprise of the agriculturist and the trader, its happy inhabitants may be supposed not often to reflect on the perilous duties of the soldier and the sailor,—on their sufferings,—and on the sacrifice of valuable life, by which so many national benefits are obtained and preserved.

The conduct of the British Troops, their valour, and endurance, have shone conspicuously under great and trying difficulties; and their character has been established in Continental warfare by the irresistible spirit with which they have effected debarkations in spite of the most formidable opposition, and by the gallantry and steadiness with which they have maintained their advantages against superior numbers.

In the official Reports made by the respective Commanders, ample justice has generally been done to the gallant exertions of the Corps employed; but the details of their services and of acts of individual bravery can only be fully given in the Annals of the various Regiments.

These Records are now preparing for publication, under His Majesty's special authority, by Mr. RICHARD CANNON, Principal Clerk of the Adjutant General's Office; and while the perusal of them cannot fail to be useful and interesting to military men of every rank, it is considered that they will also afford entertainment and information to the general reader, particularly to those who may have served in the Army, or who have relatives in the Service.

There exists in the breasts of most of those who have served, or are serving, in the Army, an *Esprit de Corps*—an attachment to everything belonging to their Regiment; to such persons a narrative of the services of their own Corps cannot fail to prove interesting. Authentic accounts of the actions of the great, the valiant, the loyal, have always been of paramount interest with a brave and civilized people. Great Britain has produced a race of heroes who, in moments of danger and terror, have stood “firm as the

rocks of their native shore:" and when half the world has been arrayed against them, they have fought the battles of their Country with unshaken fortitude. It is presumed that a record of achievements in war,—victories so complete and surprising, gained by our countrymen, our brothers, our fellow-citizens in arms,—a record which revives the memory of the brave, and brings their gallant deeds before us,—will certainly prove acceptable to the public.

Biographical Memoirs of the Colonels and other distinguished Officers will be introduced in the Records of their respective Regiments, and the Honorary Distinctions which have, from time to time, been conferred upon each Regiment, as testifying the value and importance of its services, will be faithfully set forth.

As a convenient mode of Publication, the Record of each Regiment will be printed in a distinct number, so that when the whole shall be completed, the Parts may be bound up in numerical succession.

INTRODUCTION TO THE INFANTRY.

[Table of Contents](#)

The natives of Britain have, at all periods, been celebrated for innate courage and unshaken firmness, and the national superiority of the British troops over those of other countries has been evinced in the midst of the most imminent perils. History contains so many proofs of extraordinary acts of bravery, that no doubts can be raised upon the facts which are recorded. It must therefore be admitted, that the distinguishing feature of the British soldier is INTREPIDITY. This quality was evinced by the inhabitants of England when their country was invaded by Julius Cæsar with a Roman army, on which occasion the undaunted Britons rushed into the sea to attack the Roman soldiers as they descended from their ships; and, although their discipline and arms were inferior to those of their adversaries, yet their fierce and dauntless bearing intimidated the flower of the Roman troops, including Cæsar's favourite tenth legion. Their arms consisted of spears, short swords, and other weapons of rude construction. They had chariots, to the axles of which were fastened sharp pieces of

iron resembling scythe-blades, and infantry in long chariots resembling waggons, who alighted and fought on foot, and for change of ground, pursuit or retreat, sprang into the chariot and drove off with the speed of cavalry. These inventions were, however, unavailing against Cæsar's legions: in the course of time a military system, with discipline and subordination, was introduced, and British courage, being thus regulated, was exerted to the greatest advantage; a full development of the national character followed, and it shone forth in all its native brilliancy.

The military force of the Anglo-Saxons consisted principally of infantry: Thanes, and other men of property, however, fought on horseback. The infantry were of two classes, heavy and light. The former carried large shields armed with spikes, long broad swords and spears; and the latter were armed with swords or spears only. They had also men armed with clubs, others with battle-axes and javelins.

The feudal troops established by William the Conqueror consisted (as already stated in the Introduction to the Cavalry) almost entirely of horse; but when the warlike barons and knights, with their trains of tenants and vassals, took the field, a proportion of men appeared on foot, and, although these were of inferior degree, they proved stout-hearted Britons of stanch fidelity. When stipendiary troops were employed, infantry always constituted a considerable portion of the military force; and this *arme* has since acquired, in every quarter of the globe, a celebrity never exceeded by the armies of any nation at any period.

The weapons carried by the infantry, during the several reigns succeeding the Conquest, were bows and arrows, half-pikes, lances, halberds, various kinds of battle-axes, swords, and daggers. Armour was worn on the head and body, and in course of time the practice became general for military men to be so completely cased in steel, that it was almost impossible to slay them.

The introduction of the use of gunpowder in the destructive purposes of war, in the early part of the fourteenth century, produced a change in the arms and equipment of the infantry-soldier. Bows and arrows gave place to various kinds of fire-arms, but British archers continued formidable adversaries; and, owing to the inconvenient construction and imperfect bore of the fire-arms when first introduced, a body of men, well trained in the use of the bow from their youth, was considered a valuable acquisition to every army, even as late as the sixteenth century.

During a great part of the reign of Queen Elizabeth each company of infantry usually consisted of men armed five different ways; in every hundred men forty were "*men-at-arms*," and sixty "*shot*;" the "*men-at-arms*" were ten halberdiers, or battle-axe men, and thirty pikemen; and the "*shot*" were twenty archers, twenty musketeers, and twenty harquebusiers, and each man carried, besides his principal weapon, a sword and dagger.

Companies of infantry varied at this period in numbers from 150 to 300 men; each company had a colour or ensign, and the mode of formation recommended by an English military writer (Sir John Smithe) in 1590 was:—the colour in

the centre of the company guarded by the halberdiers; the pikemen in equal proportions, on each flank of the halberdiers: half the musketeers on each flank of the pikes; half the archers on each flank of the musketeers, and the harquebusiers (whose arms were much lighter than the muskets then in use) in equal proportions on each flank of the company for skirmishing.^[1] It was customary to unite a number of companies into one body, called a REGIMENT, which frequently amounted to three thousand men: but each company continued to carry a colour. Numerous improvements were eventually introduced in the construction of fire-arms, and, it having been found impossible to make armour proof against the muskets then in use (which carried a very heavy ball) without its being too weighty for the soldier, armour was gradually laid aside by the infantry in the seventeenth century: bows and arrows also fell into disuse, and the infantry were reduced to two classes, viz.: *musketeers*, armed with matchlock muskets, swords, and daggers; and *pikemen*, armed with pikes from fourteen to eighteen feet long, and swords.

In the early part of the seventeenth century Gustavus Adolphus, King of Sweden, reduced the strength of regiments to 1000 men. He caused the gunpowder, which had heretofore been carried in flasks, or in small wooden bandoliers, each containing a charge, to be made up into cartridges, and carried in pouches; and he formed each regiment into two wings of musketeers, and a centre division of pikemen. He also adopted the practice of forming four regiments into a brigade; and the number of colours was afterwards reduced to three in each regiment. He

formed his columns so compactly that his infantry could resist the charge of the celebrated Polish horsemen and Austrian cuirassiers; and his armies became the admiration of other nations. His mode of formation was copied by the English, French, and other European states; but so great was the prejudice in favour of ancient customs, that all his improvements were not adopted until near a century afterwards.

In 1664 King Charles II. raised a corps for sea-service, styled the Admiral's regiment. In 1678 each company of 100 men usually consisted of 30 pikemen, 60 musketeers, and 10 men armed with light firelocks. In this year the King added a company of men armed with hand grenades to each of the old British regiments, which was designated the "grenadier company." Daggers were so contrived as to fit in the muzzles of the muskets, and bayonets, similar to those at present in use, were adopted about twenty years afterwards.

An Ordnance regiment was raised in 1685, by order of King James II., to guard the artillery, and was designated the Royal Fusiliers (now 7th Foot). This corps, and the companies of grenadiers, did not carry pikes.

King William III. incorporated the Admiral's regiment in the second Foot Guards, and raised two Marine regiments for sea-service. During the war in this reign, each company of infantry (excepting the fusiliers and grenadiers) consisted of 14 pikemen and 46 musketeers; the captains carried pikes; lieutenants, partisans; ensigns, half-pikes; and serjeants, halberds. After the peace in 1697 the Marine
