Headlong Hall

PREFACE

ALL these little publications appeared originally without prefaces. I left them to speak for themselves; and I thought I might very fitly preserve my own impersonality, having never intruded on the personality of others, nor taken any liberties but with public conduct and public opinions. But an old friend assures me, that to publish a book without a preface is like entering a drawing-room without making a bow. In deference to this opinion, though I am not quite clear of its soundness, I make my prefatory bow at this eleventh hour.

“Headlong Hall” was written in 1815; “Nightmare Abbey” in 1817; “Maid Marian”, with the exception of the last three chapters, in 1818; “Crotchet Castle” in 1830. I am desirous to note the intervals, because, at each of those periods, things were true, in great matters and in small, which are true no longer. “Headlong Hall” begins with the Holyhead Mail, and “Crotchet Castle” ends with a rotten borough. The Holyhead mail no longer keeps the same hours, nor stops at the Capel Cerig Inn, which the progress of improvement has thrown out of the road; and the rotten boroughs of 1830 have ceased to exist, though there are some very pretty pocket properties, which are their worthy successors. But the classes of tastes, feelings, and opinions, which were successively brought into play in these little tales, remain substantially the same. Perfectibilians, deteriorationists, statu-quo-ites, phrenologists, transcendentalists, political economists, theorists in all sciences, projectors in all arts, morbid visionaries, romantic enthusiasts, lovers of music, lovers of the picturesque, and lovers of good dinners, march, and will march for ever, *pari passu* with the march of mechanics, which some facetiously call the march of the intellect. The fastidious in old wine are a race that does not decay. Literary violators of the confidences of private life still gain a disreputable livelihood and an unenviable notoriety. Match-makers from interest, and the disappointed in love and in friendship, are varieties of which specimens are extant. The great principle of the Right of Might is as flourishing now as in the days of Maid Marian: the array of false pretensions, moral, political, and literary, is as imposing as ever: the rulers of the world still feel things in their effects, and never foresee them in their causes: and political mountebanks continue, and will continue, to puff nostrums and practise legerdemain under the eyes of the multitude: following, like the “learned friend” of Crotchet Castle, a course as tortuous as that of a river, but in a reverse process; beginning by being dark and deep, and ending by being transparent.

The Author of “Headlong Hall”.

March 4, 1837.

CHAPTER 1. THE MAIL

THE ambiguous light of a December morning, peeping through the windows of the Holyhead mail, dispelled the soft visions of the four insides, who had slept, or seemed to sleep, through the first seventy miles of the road, with as much comfort as may be supposed consistent with the jolting of the vehicle, and an occasional admonition to *remember the coachman*, thundered through the open door, accompanied by the gentle breath of Boreas, into the ears of the drowsy traveller.

A lively remark, that *the day was none of the finest*, having elicited a repartee of *quite the contrary*, the various knotty points of meteorology, which usually form the exordium of an English conversation, were successively discussed and exhausted; and, the ice being thus broken, the colloquy rambled to other topics, in the course of which it appeared, to the surprise of every one, that all four, though perfect strangers to each other, were actually bound to the same point, namely, Headlong Hall, the seat of the ancient and honourable family of the Headlongs, of the vale of Llanberris, in Caernarvonshire. This name may appear at first sight not to be truly Cambrian, like those of the Rices, and Prices, and Morgans, and Owens, and Williamses, and Evanses, and Parrys, and Joneses; but, nevertheless, the Headlongs claim to be not less genuine derivatives from the antique branch of Cadwallader than any of the last named multiramified families. They claim, indeed, by one account, superior antiquity to all of them, and even to Cadwallader himself, a tradition having been handed down in Headlong Hall for some few thousand years, that the founder of the family was preserved in the deluge on the summit of Snowdon, and took the name of Rhaiader, which signifies a *waterfall*, in consequence of his having accompanied the water in its descent or diminution, till he found himself comfortably seated on the rocks of Llanberris. But, in later days, when commercial bagmen began to scour the country, the ambiguity of the sound induced his descendants to drop the suspicious denomination of *Riders*, and translate the word into English; when, not being well pleased with the sound of the *thing*, they substituted that of the *quality*, and accordingly adopted the name *Headlong*, the appropriate epithet of waterfall.

I cannot tell how the truth may be:

I say the tale as 'twas said to me.

The present representative of this ancient and dignified house, Harry Headlong, Esquire, was, like all other Welsh squires, fond of shooting, hunting, racing, drinking, and other such innocent amusements, *μειζονος δ' αλλου τινος*, as Menander expresses it.

But, unlike other Welsh squires, he had actually suffered certain phenomena, called books, to find their way into his house; and, by dint of lounging over them after dinner, on those occasions when he was compelled to take his bottle alone, he became seized with a violent passion to be thought a philosopher and a man of taste; and accordingly set off on an expedition to Oxford, to inquire for other varieties of the same genera, namely, men of taste and philosophers; but, being assured by a learned professor that there were no such things in the University, he proceeded to London, where, after beating up in several booksellers' shops, theatres, exhibition-rooms, and other resorts of literature and taste, he formed as extensive an acquaintance with philosophers and dilettanti as his utmost ambition could desire: and it now became his chief wish to have them all together in Headlong Hall, arguing, over his old Port and Burgundy, the various knotty points which had puzzled his pericranium. He had, therefore, sent them invitations in due form to pass their Christmas at Headlong Hall; which invitations the extensive fame of his kitchen fire had induced the greater part of them to accept; and four of the chosen guests had, from different parts of the metropolis, ensconced themselves in the four corners of the Holyhead mail.

These four persons were, Mr Foster¹, the perfectibilian; Mr Escot², the deteriorationist; Mr Jenkison³, the statu-quo-ite; and the Reverend Doctor Gaster⁴, who, though of course neither a philosopher nor a man of taste, had so won on the Squire's fancy, by a learned dissertation on the art of stuffing a turkey, that he concluded no Christmas party would be complete without him.

The conversation among these illuminati soon became animated; and Mr Foster, who, we must observe, was a thin gentleman, about thirty years of age, with an aquiline nose, black eyes, white teeth, and black hair—took occasion to panegyryze the vehicle in which they were then travelling, and observed what remarkable improvements had been made in the means of facilitating intercourse between distant parts of the kingdom: he held forth with great energy on the subject of roads and railways, canals and tunnels, manufactures and machinery: “In short,” said he, “every thing we look on attests the progress of mankind in all the arts of life, and demonstrates their gradual advancement towards a state of unlimited perfection.”

Mr Escot, who was somewhat younger than Mr Foster, but rather more pale and saturnine in his aspect, here took up the thread of the discourse, observing, that the proposition just advanced seemed to him perfectly contrary to the true state of the case: “for,” said he, “these improvements, as you call them, appear to me only so many links in the

great chain of corruption, which will soon fetter the whole human race in irreparable slavery and incurable wretchedness: your improvements proceed in a simple ratio, while the factitious wants and unnatural appetites they engender proceed in a compound one; and thus one generation acquires fifty wants, and fifty means of supplying them are invented, which each in its turn engenders two new ones; so that the next generation has a hundred, the next two hundred, the next four hundred, till every human being becomes such a helpless compound of perverted inclinations, that he is altogether at the mercy of external circumstances, loses all independence and singleness of character, and degenerates so rapidly from the primitive dignity of his sylvan origin, that it is scarcely possible to indulge in any other expectation, than that the whole species must at length be exterminated by its own infinite imbecility and vileness."

"Your opinions," said Mr Jenkison, a round-faced little gentleman of about forty-five, "seem to differ *toto cælo*. I have often debated the matter in my own mind, *pro* and *con*, and have at length arrived at this conclusion,—that there is not in the human race a tendency either to moral perfectibility or deterioration; but that the quantities of each are so exactly balanced by their reciprocal results, that the species, with respect to the sum of good and evil, knowledge and ignorance, happiness and misery, remains exactly and perpetually *in statu quo*."

"Surely," said Mr Foster, "you cannot maintain such a proposition in the face of evidence so luminous. Look at the progress of all the arts and sciences,—see chemistry, botany, astronomy——"

"Surely," said Mr Escot, "experience deposes against you. Look at the rapid growth of corruption, luxury, selfishness——"

"Really, gentlemen," said the Reverend Doctor Gaster, after clearing the husk in his throat with two or three hems, "this is a very sceptical, and, I must say, atheistical conversation, and I should have thought, out of respect to my cloth——"

Here the coach stopped, and the coachman, opening the door, vociferated—"Breakfast, gentlemen;" a sound which so gladdened the ears of the divine, that the alacrity with which he sprang from the vehicle superinduced a distortion of his ankle, and he was obliged to limp into the inn between Mr Escot and Mr Jenkison; the former observing, that he ought to look for nothing but evil, and, therefore, should not be surprised at this little accident; the latter remarking, that the comfort of a good breakfast, and the pain of a sprained ankle, pretty exactly balanced each other.

CHAPTER 2. THE SQUIRE—THE BREAKFAST

SQUIRE HEADLONG, in the meanwhile, was quadripartite in his locality; that is to say, he was superintending the operations in four scenes of action—namely, the cellar, the library, the picture-gallery, and the dining-room,—preparing for the reception of his philosophical and dilettanti visitors. His myrmidon on this occasion was a little red-nosed butler, whom nature seemed to have cast in the genuine mould of an antique Silenus, and who waddled about the house after his master, wiping his forehead and panting for breath, while the latter bounced from room to room like a cracker, and was indefatigable in his requisitions for the proximity of his vinous Achates, whose advice and co-operation he deemed no less necessary in the library than in the cellar. Multitudes of packages had arrived, by land and water, from London, and Liverpool, and Chester, and Manchester, and Birmingham, and various parts of the mountains: books, wine, cheese, globes, mathematical instruments, turkeys, telescopes, hams, tongues, microscopes, quadrants, sextants, fiddles, flutes, tea, sugar, electrical machines, figs, spices, air-pumps, soda-water, chemical apparatus, eggs, French-horns, drawing books, palettes, oils and colours, bottled ale and porter, scenery for a private theatre, pickles and fish-sauce, patent lamps and chandeliers, barrels of oysters, sofas, chairs, tables, carpets, beds, looking-glasses, pictures, fruits and confections, nuts, oranges, lemons, packages of salt salmon, and jars of Portugal grapes. These, arriving with infinite rapidity, and in inexhaustible succession, had been deposited at random, as the convenience of the moment dictated,—sofas in the cellar, chandeliers in the kitchen, hampers of ale in the drawing-room, and fiddles and fish-sauce in the library. The servants, unpacking all these in furious haste, and flying with them from place to place, according to the tumultuous directions of Squire Headlong and the little fat butler who fumed at his heels, chafed, and crossed, and clashed, and tumbled over one another up stairs and down. All was bustle, uproar, and confusion; yet nothing seemed to advance: while the rage and impetuosity of the Squire continued fermenting to the highest degree of exasperation, which he signified, from time to time, by converting some newly unpacked article, such as a book, a bottle, a ham, or a fiddle, into a missile against the head of some unfortunate servant who did not seem to move in a ratio of velocity corresponding to the intensity of his master's desires.

In this state of eager preparation we shall leave the happy inhabitants of Headlong Hall, and return to the three philosophers and the unfortunate divine, whom we left limping with a sprained ankle, into the breakfast-room of the inn; where his two supporters deposited him

safely in a large arm-chair, with his wounded leg comfortably stretched out on another. The morning being extremely cold, he contrived to be seated as near the fire as was consistent with his other object of having a perfect command of the table and its apparatus; which consisted not only of the ordinary comforts of tea and toast, but of a delicious supply of new-laid eggs, and a magnificent round of beef; against which Mr Escot immediately pointed all the artillery of his eloquence, declaring the use of animal food, conjointly with that of fire, to be one of the principal causes of the present degeneracy of mankind. "The natural and original man," said he, "lived in the woods: the roots and fruits of the earth supplied his simple nutriment: he had few desires, and no diseases. But, when he began to sacrifice victims on the altar of superstition, to pursue the goat and the deer, and, by the pernicious invention of fire, to pervert their flesh into food, luxury, disease, and premature death, were let loose upon the world. Such is clearly the correct interpretation of the fable of Prometheus, which is the symbolical portraiture of that disastrous epoch, when man first applied fire to culinary purposes, and thereby surrendered his liver to the vulture of disease. From that period the stature of mankind has been in a state of gradual diminution, and I have not the least doubt that it will continue to grow *small by degrees, and lamentably less*, till the whole race will vanish imperceptibly from the face of the earth."

"I cannot agree," said Mr Foster, "in the consequences being so very disastrous. I admit, that in some respects the use of animal food retards, though it cannot materially inhibit, the perfectibility of the species. But the use of fire was indispensably necessary, as Æschylus and Virgil expressly assert, to give being to the various arts of life, which, in their rapid and interminable progress, will finally conduct every individual of the race to the philosophic pinnacle of pure and perfect felicity."

"In the controversy concerning animal and vegetable food," said Mr Jenkison, "there is much to be said on both sides; and, the question being in equipoise, I content myself with a mixed diet, and make a point of eating whatever is placed before me, provided it be good in its kind." In this opinion his two brother philosophers practically coincided, though they both ran down the theory as highly detrimental to the best interests of man.

"I am really astonished," said the Reverend Doctor Gaster, gracefully picking off the supernal fragments of an egg he had just cracked, and clearing away a space at the top for the reception of a small piece of butter—"I am really astonished, gentlemen, at the very heterodox opinions I have heard you deliver: since nothing can be more obvious than that all animals were created solely and exclusively for the use of man."

"Even the tiger that devours him?" said Mr Escot.

"Certainly," said Doctor Gaster.

“How do you prove it?” said Mr Escot.

“It requires no proof,” said Doctor Gaster: “it is a point of doctrine. It is written, therefore it is so.”

“Nothing can be more logical,” said Mr Jenkison. “It has been said,” continued he, “that the ox was expressly made to be eaten by man: it may be said, by a parity of reasoning, that man was expressly made to be eaten by the tiger: but as wild oxen exist where there are no men, and men where there are no tigers, it would seem that in these instances they do not properly answer the ends of their creation.”

“It is a mystery,” said Doctor Gaster.

“Not to launch into the question of final causes,” said Mr Escot, helping himself at the same time to a slice of beef, “concerning which I will candidly acknowledge I am as profoundly ignorant as the most dogmatical theologian possibly can be, I just wish to observe, that the pure and peaceful manners which Homer ascribes to the Lotophagi, and which at this day characterise many nations (the Hindoos, for example, who subsist exclusively on the fruits of the earth), depose very strongly in favour of a vegetable regimen.”

“It may be said, on the contrary,” said Mr Foster, “that animal food acts on the mind as manure does on flowers, forcing them into a degree of expansion they would not otherwise have attained. If we can imagine a philosophical auricula falling into a train of theoretical meditation on its original and natural nutriment, till it should work itself up into a profound abomination of bullock's blood, sugar-baker's scum, and other *unnatural* ingredients of that rich composition of soil which had brought it to perfection⁵, and insist on being planted in common earth, it would have all the advantage of natural theory on its side that the most strenuous advocate of the vegetable system could desire; but it would soon discover the practical error of its retrograde experiment by its lamentable inferiority in strength and beauty to all the auriculas around it. I am afraid, in some instances at least, this analogy holds true with respect to mind. No one will make a comparison, in point of mental power, between the Hindoos and the ancient Greeks.”

“The anatomy of the human stomach,” said Mr Escot, “and the formation of the teeth, clearly place man in the class of frugivorous animals.”
