ORGANIC SYNTHESIS

Strategy and Control

 WILEY

Contents

Preface

Section A: Introduction: Selectivity

1. Planning Organic Syntheses: Tactics, Strategy and Control

A Modern Synthesis: Fostriecin (CI-920)

References

2. Chemoselectivity

Definitions

Chemoselectivity by Reactivity and Protection: An
anti-Malaria Drug

When Protection is not Needed

Chemoselectivity by Reagent: The Pinacol
Rearrangement

Chemoselectivity in Enol and Enolate Formation

Examples of Chemoselective Reactions in
Synthesis

References

3. Regioselectivity: Controlled Aldol Reactions

Definition

Specific Enol Equivalents

[Regioselective Aldol Reactions](#)
[Reaction at Oxygen or Carbon? Silylation,](#)
[Acylation and Alkylation](#)
[Acylation at Carbon](#)
[Reactions with Other Electrophiles](#)
[A Final Example](#)
[References](#)

[4. Stereoselectivity: Stereoselective Aldol Reactions](#)

[The Stereochemistry of the Aldol Reaction](#)
[Stereoselectivity outside the Aldol Relationship](#)
[References](#)
[A Note on Stereochemical Nomenclature](#)

[5. Alternative Strategies for Enone Synthesis](#)

[The Synthesis of Enones by Many Strategies](#)
[Strategy 4a: The Aldol Route to Enones](#)
[Strategy 4b: Acylation of a Vinyl Anion](#)
[Strategy 4c: Unsaturated Acyl Cations and Anions](#)
[References](#)

[6. Choosing a Strategy: The Synthesis of Cyclopentenones](#)

[Strategies Based on an Aldol Reaction](#)
[Using the Aliphatic Friedel-Crafts Reaction](#)
[The Nazarov Reaction](#)

[Cycloadditions of Fe\(CO\)₄ Complexes of Oxyallyl cations](#)

[The Pauson-Khand Reaction](#)

[Recent Developments in the Pauson-Khand Reaction](#)

[Oxidative Rearrangement of Tertiary Allylic Alcohols](#)

[Other Methods](#)

[References](#)

Section B: Making Carbon-Carbon Bonds

7. The *Ortho* Strategy for Aromatic Compounds

[Introduction](#)

[PART I Friedel-Crafts Reaction and Fries Rearrangement](#)

[The Claisen Rearrangement](#)

[PART II Using Lithium](#)

[*Ortho*-lithiation](#)

[Multiple Directed Lithiations](#)

[Reactions of Fluoroanisoles](#)

[Several lithiations](#)

[Halogens](#)

[Benzyne Formation—A different aromatic strategy](#)

[\$\alpha\$ -Lithiation](#)

[Lateral Lithiation](#)

[Summary](#)

[Summary of Reagents](#)
[References](#)

[8. \$\sigma\$ -Complexes of Metals](#)

[Introduction *The structure of organo-lithium compounds*](#)
[Transition Metal Complexes](#)
[References](#)

[9. Controlling the Michael Reaction](#)

[Introduction: *Conjugate, 1,4- or Michael addition vs direct or 1,2-addition*](#)
[Using Copper \(I\) to Achieve Michael Addition](#)
[Michael Addition followed by Reaction with Electrophiles](#)
[A Double Nucleophile: An Interlude without Copper](#)
[A Michael Reaction Coupled to a Photochemical Cyclisation: Copper Again](#)
[Michael Additions of Heteroatom Nucleophiles](#)
[Michael Additions with and without Copper: Functionalised Michael Donors](#)
[References](#)

[10. Specific Enol Equivalents](#)

[Introduction: *Equilibrium and Specific Enolates*](#)
[Enolates from 1,3-di-Carbonyl Compounds](#)
[Enamines and Aza-Enolates](#)
[Lithium Enolates and Silyl Enol Ethers](#)

[Tables of Enol Equivalents and Specific Enolates](#)
[Modern Use of Specific Enolate Equivalents](#)
[References](#)

[11. Extended Enolates](#)

[Introduction: *The extended enolate problem.*](#)
[Wittig and Horner-Wadsworth-Emmons Reactions](#)
[Extended Aza-Enolates](#)
[Extended Lithium Enolates of Aldehydes](#)
[Summary: \$\alpha\$ -Alkylation of Extended Enolates](#)
[Reaction in the \$\gamma\$ -Position](#)
[Extended Enolates from Unsaturated Ketones](#)
[Diels-Alder Reactions](#)
[Extended Enolates from Birch Reductions](#)
[The Baylis-Hillman Reaction](#)
[The Synthesis of Mniopetal F](#)
[A Synthesis of Vertinolide Using \$\alpha'\$ and \$\gamma\$ -](#)
[Extended Enolates](#)
[Conclusion: Extended Enolate or Allyl Anion?](#)
[References](#)

[12. Allyl Anions](#)

[Introduction: Allyl Grignard Reagents](#)
[Allylic Lithiums and Grignard Reagents](#)
[Allyl Nickel Complexes](#)
[Allyl Silanes](#)
[An Allyl Dianion? The Role of Tin in Anion](#)
[Formation](#)
[Halide Exchange with Chelation: Indium Allyls](#)

[Allyl Anions by Deprotonation](#)
[References](#)

[13. Homoenolates](#)

[Introduction: *Homoenolisation and homoenolates*](#)

[Three-Membered Ring Homoenolate Equivalents](#)
[\(The 'Direct' Strategy\).](#)

[The Defensive Strategy: \$d^3\$ Reagents with](#)
[Protected Carbonyl Groups](#)

[The Offensive Strategy: Heteroatom-Substituted](#)
[Allyl Anions](#)

[Allyl Carbamates](#)

[References](#)

[14. Acyl Anion Equivalents](#)

[Introduction: *Acyl Anions?*](#)

[Acyl Anion Equivalents: \$d^1\$ Reagents](#)

[Modified Acetals as Acyl Anion Equivalents](#)

[Protected Cyanohydrins of Aldehydes](#)

[Methods Based on Vinyl \(Enol\) Ethers and](#)
[Enamines](#)

[Oxidative Cleavage of Allenes](#)

[Vinyl Ethers and Enamines from Wittig-Style](#)
[Reactions](#)

[Nitroalkanes](#)

32. Functionalisation of Pyridine

Introduction

PART I – THE PROBLEM

N-Nitro Heterocycles as Nitrating Agents

PART II – TRADITIONAL SOLUTIONS: ADDITION OF
ELECTRON-DONATING SUBSTITUENTS

Regioselectivity in Electrophilic Substitution with
Electron-Donating Groups

The Anti-Tumour Antibiotic Kedarcidin

Halogenation and Metallation

Pyridine N- Oxides in Electrophilic Substitution

Ortho-Lithiation of Pyridines

Diazines

The Halogen Dance

Tandem Double Lithiation: *The asymmetric
synthesis of camptothecin*

Tandem Lithiation of Pyridine N- Oxides and
Nucleophilic Substitution

PART III – SURPRISINGLY SUCCESSFUL DIRECT
ELECTROPHILIC SUBSTITUTIONS

PART IV – SUCCESSFUL NITRATION OF PYRIDINE

Sulfonation of Pyridines

Extension by Vicarious Nucleophilic Aromatic
Substitution

Synthesis of Imidazo[4,5-c]pyridines

PART V – APPLICATIONS

Preface

We would like to thank those who have had the greatest influence on this book, namely the undergraduates at the Universities of Bristol and Cambridge. But, particularly we would like to thank the organic chemists at Organon (Oss), AstraZeneca (Alderley Park, Avlon Works, Mölndal and Macclesfield), Lilly (Windlesham), Solvay (Weesp) and Novartis (Basel) who contributed to the way the book was written more than they might realise. These chemists will recognise material from our courses on The Disconnection Approach, Advanced Heterocyclic Chemistry, New Synthetic Methods and Asymmetric Synthesis. Additionally we would like to thank the participants at the SCI courses organised by the Young Chemists Panel. All these industrial chemists participated in our courses and allowed us to find the best way to explain concepts that are difficult to grasp. This book has changed greatly over the ten years it was being written as we became more informed over what was really needed. The book is intended for that very audience – final year undergraduates, graduate students and professional chemists in industry.
