Practical Introduction  
to  
Physical Radiesthesia

(Lecher Antenna & Universal Pendulum)

## Practical Introduction to Physical Radiesthesia

### About the author:

For 40 years I advised people in precarious health situations. Predominantly in cases of cancer, with a medical diagnosis of geopathic stress. My task was to determine the reasons on the spot and to eliminate the causes.

It is a matter of the heart for me to pass on the special knowledge that I have been able to acquire in the course of my successful work as a geobiological consultant, building biology measurement technician and radiesthesic researcher.

Born 1953. Degree in education with distinction. Active as an author since 2020. Current research on the phenomenon of planetary lines.

### **Book description:**

The easy-to-understand introduction builds an attractive bridge for traditionally working dowzers, commuters - and also beginners - to a way of working that not only increases the reliability of the results.

It supports the radiesthesic work like a tailwind. The exact adjustment of the „Lecher Antenna“ or the „French Universal Pendulum“ is the secret that explains the extremely lively, powerful response - selective and pinpoint - a joy for the user.

The black and white of sober „reaction zones“ becomes quasicoloured, and the results are easier to name and communicate.

Without question, the effectiveness of geobiological counselling benefits from the method. But it becomes indispensable with the planetary lines that the author presented. The aesthetic structure of 21 spectroids cannot be adequately grasped by traditional mental methods because of their complexity and systematics.

The „leylines“ reveal themselves in the author's research as planetary lines. They explain their complexity and distinctiveness, and they enable unambiguous naming. Therefore, a serious future leyline research is hardly imaginable without an open-mindedness for a physical radiesthesia.

This book is dedicated to this situation. May it inspire and encourage new learning and discovery!
