Acknowledgements

My thanks go to my family and friends who have made me who I am today. Special thanks to all those who supported me in writing this book. I would like to thank all my classmates, teachers, fellow students, lecturers, demonstrators, activists, colleagues, companies and countries with whom I have had the privilege of sharing the experiences from which all the ideas in this book have emerged. I would like to thank the staff of Books on Demand for their kind helpfulness. I thank the citizens of Seligenstadt for the harmony and solidarity in which I was able to write.

Foreword

This policy concept contains a variety of proposals for possible political reforms. It can be peacefully and democratically adapted to any current political system of any state in the world, but also to political systems in families, clubs, associations or companies. Wherever humans make or submit to rules that manage living together, the following proposals can be helpful. Readers who find the proposals so helpful that they would like to implement them together with like-minded people can contact the author. The contact form on the last page can be used for this purpose.

Faults and defects

I ask for your understanding that this volume was not professionally proofread. I could only afford professional proofreading for the summary. Spelling errors and unfortunate phrasing may therefore occur. As soon as this volume has sold enough to pay for a professional proofreading, it will be done. After that, a new edition will be published.

English version

Please understand that this volume has been translated automatically. I could only afford a professional translation for the summary. Poor wording and spelling errors may therefore occur. In case of doubt, the German version shall prevail. As soon as this volume has sold enough to pay for a professional translation, it will be done. After that, a new edition will be published. It was more important to me that no one in the world should have an information advantage than individual translation errors in the complete work.

References

If something has been quoted directly, it is set in italics. If the headings contain footnotes, the sources for direct and indirect quotations apply in the chapter for which the heading stands. Otherwise, quotations or source references are directly at the word or at the end of the sentence or paragraph. This book contains parts of text based on the Federal Constitution of the Swiss Confederation of 18 April 1999 (as of 12 February 2017), abbreviated to BV¹ and the Constitution of the Canton of Bern of 6 June 1993 (as of 11 March 2015), abbreviated to KV².

If the constitutional paragraph, or individual paragraphs thereof, are based in whole or in part on extracts from the BV or KV, this is indicated in a footnote. The references to the corresponding footnotes for constitutional paragraphs are usually found after the heading of the affected chapter and sometimes in the body of the text. Articles used in the Swiss constitutions are listed in the footnote with a number after the title of the constitutional paragraph. Example: §123
Sample title: BV Art.123, KV Art.123.

All internet sources are fully cited in the footnotes. They were last accessed on 30.09.2021. All literature sources are also listed in full in the footnotes.

All references to tasks undertaken by other ministries and described in more detail there are given in footnotes. Example: Model Ministry - 1.2.3 Model Chapter.

All footnotes are to be viewed in comparison to the respective source, so-called indirect quotations. Direct quotations are set in italics, but hardly ever occur. The source reference is intended to enable further investigation and to take copyright into account.

1 Goals of the Ministry of Digital Affairs

The aim of the Ministry of Digital Affairs is to enable a virtual civil society that is involved in opinion-forming and legislation. The state with its ministries and governments thus receives a virtual image of the inland, consisting of personal, technical and geographical data. With this image, the state is able to carry out a policy simulation for the future effects of today's deciders. Big data is dangerous if the data is not subject to democratic control.

Big Data means that personal data is stored en masse and correlated with each other. But it is a great way to make policy. So far, Big Data is mainly known for enterprise policy decisions to use customer data to create market analyses in order to sell more. The intranet is a state citizen platform that uses citizen data for state policy decisions in order to create analyses of the people in order to govern in the interest of the common good.

Ensuring the security and protection of data and digital content constantly at the highest possible level is a significant goal of the Ministry of Digital Affairs. Equally important, however, is taking advantage of the fact that digital data can be copied and shared as often as desired. To ease this tension, the Ministry of Digital Affairs uses the mentality of open source systems, also called "open source". This community practice is copied and supported by the Ministry of Digital Affairs. In the open source community, volunteers create operating systems, programmes and updates free of charge for all users. Creators and users help each other find and fix faults in the systems.

The aim is to be able to offer more voting procedures more frequently and more cheaply, but at the same time to prevent multiple voting. Similarly, state news should no

longer have to be sent in paper form by post to a fixed address. Companies and persons should also be allowed to use the devices and the intranet, because the infrastructure exists anyway and use for economic purposes is in the interest of the national economy and helps to link the economic forms.

The medium-term goal is to expand the domestic citizens' intranet to include the continental intranet.

The long-term goal is to set up a global intranet in the united states of the world while maintaining data security. How quickly this happens will be decided by the citizens, because this is about trust and not just about policy integration. Separation is easy because the data and systems can be encrypted or decrypted.
