About the Author

Guy Hart-Davis is the author of more than 175 computer books, including *Teach Yourself VISUALLY MacBook Pro and MacBook Air*, *Teach Yourself VISUALLY Google Workspace*, *Teach Yourself VISUALLY Chromebook*, *Teach Yourself VISUALLY Word 2019*, *Teach Yourself VISUALLY iPad*, and *Teach Yourself VISUALLY Android Phones and Tablets*, 2nd Edition.

Author's Acknowledgments

My thanks go to the many people who turned my manuscript into the highly graphical book you are holding. In particular, I thank Jim Minatel for asking me to write the book; Lynn Northrup for keeping me on track; Kim Wimpsett for skillfully editing the text; Ryan Williams for reviewing the book for technical accuracy and contributing helpful suggestions; Susan Hobbs for proofreading the book minutely; and Straive for laying out the book.

How to Use This Book

Who This Book Is For

This book is for the reader who has never used this particular technology or software application. It is also for readers who want to expand their knowledge.

The Conventions in This Book

1 Steps

This book uses a step-by-step format to guide you easily through each task. **Numbered steps** are actions you must do; **bulleted steps** clarify a point, step, or optional feature; and **indented steps** give you the result.

2 Notes

Notes give additional information — special conditions that may occur during an operation, a situation that you want to avoid, or a cross-reference to a related area of the book.

3 Icons and Buttons

Icons and buttons show you exactly what you need to click to perform a step.

4 Tips

Tips offer additional information, including warnings and shortcuts.

5 Bold

Bold type shows command names, options, and text or numbers you must type.

6 Italics

Italic type introduces and defines a new term.

Organize and Read Your E-Mail by Threads

The Mail app gives you two ways to view e-mail messages. You can view the messages as a simple list, or you can view them with related messages organized into threads, which are sometimes called conversations.

Having Mail display your messages as threads can help you navigate your Inbox quickly and find related messages easily. You may find threading useful if you tend to have long e-mail conversations, because threading reduces the number of messages you see at once.

Organize and Read Your E-Mail by Threads

Set Mail to Organize Your Messages by Thread

- On the Home screen, tap **Settings** (⚙️).
- The Settings screen appears.
- Tap **Mail** (✉️).
- The Mail screen appears.
- In the Threading section, set the **Organize by Thread** switch to On (☑️).
- Set the **Collapse Read Messages** switch to On (☑️) to save space by collapsing messages you have read.
- Set the **Most Recent Message on Top** switch to On (☑️) to make the newest message in each thread appear at the top of the screen. This option is often helpful for keeping up with your messages.
- Set the **Complete Threads** switch to On (☑️) to have each thread show all its messages, even if you have moved some messages to other mailboxes. This option is usually helpful.
- Tap **Muted Thread Action** to display the Muted Thread Action screen, and then tap **Mark as Read** or **Archive** or **Delete** to specify which action Mail should take when you mute a thread.

Read Messages Organized into Threads

- On the Home screen, tap **Mail** (✉️). The Mailboxes screen appears.
- Note:** If Mail displays the contents of a mailbox, tap **Back** (⏮️) to return to the Mailboxes screen.
- Tap the mailbox you want to open. The Index for the account appears. The **Expand Thread** icon on the right, a right-pointing arrow in a circle (➡️), indicates a thread.
- Tap **Expand Thread** (➡️) changes to (⏮️).

The thread expands, showing the messages it contains from other people. You can get an overview of the thread's contents.

- Tap the message you want to view. The thread opens.
- The bar at the top of the screen shows the number of messages in the thread.
- Tap the message you want to display.

TIP

Is there a quick way to enter my name and information at the end of a message?
Yes. You can create one or more e-mail signatures, which are sections of predefined text that Mail can insert at the end of messages. From the Home screen, tap **Settings** (⚙️), and then tap **Mail** (✉️). Scroll down to the Composing section and tap **Signature** to display the Signature screen. Tap **All Accounts** to use the same signature for each account, or tap **Per Account** to use a different signature for each account. Then type the text to use for the signature or signatures.

CHAPTER 1

Getting Started with Your iPhone

In this chapter, you set up your iPhone to work with your computer or iCloud. You choose items to sync and learn to use the iPhone's interface.

[Identify and Compare the iPhone Models](#)
[Using Your iPhone's Controls](#)
[Set Up and Activate Your iPhone](#)

[Set Up Your iPhone Using Finder or iTunes](#)

[Choose Which Items to Sync from Your Computer](#)

[Explore the Interface and Launch Apps](#)

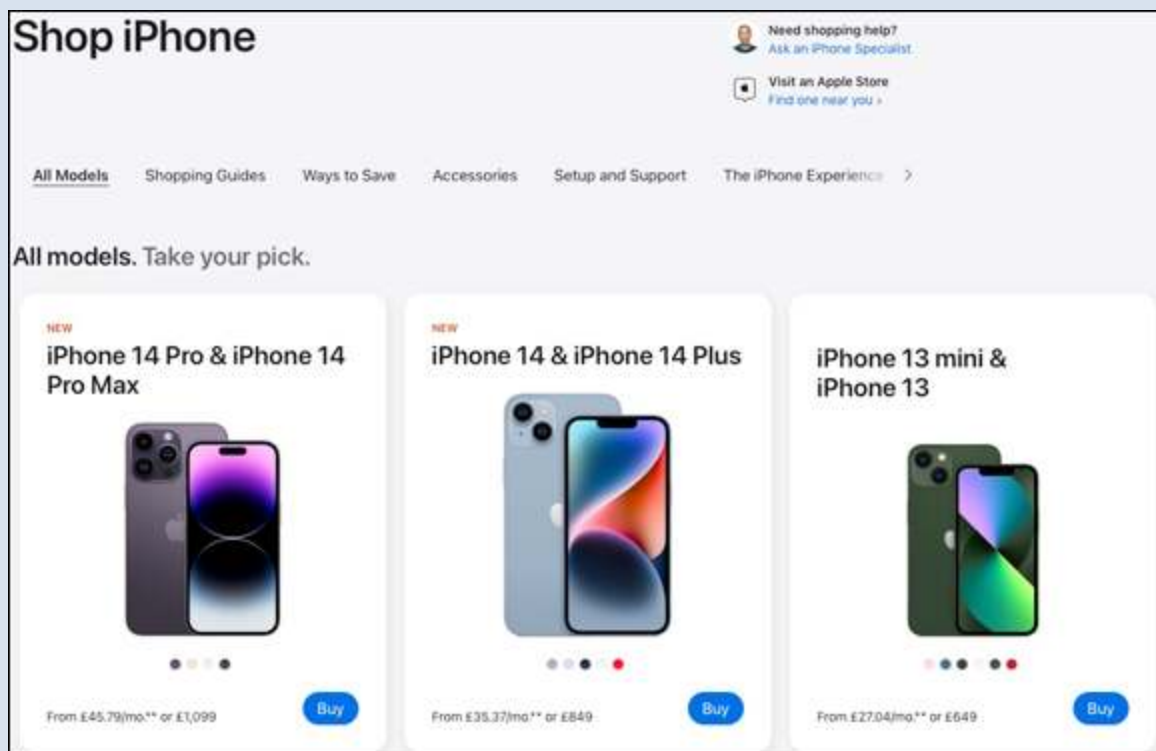

[Using Cover Sheet and Today View](#)

[Using Control Center](#)

Identify and Compare the iPhone Models

The iPhone is a series of hugely popular smartphones designed by Apple. As of this writing, Apple sells seven iPhone models that differ in size, power, features, and price. This section explains the seven models, their common features, and their differences to enable you to distinguish them and choose among them.

Understanding the Seven iPhone Models

As of this writing, Apple sells seven iPhone models. Four models are in the iPhone 14 family, which Apple introduced in September 2022. The base model in this family is called simply iPhone 14; it has a sibling called iPhone 14 Plus that has a larger screen but is otherwise almost identical. The other two models are in the Pro line

and have different sizes. The iPhone 14 Pro is the smaller of the two, and the iPhone 14 Pro Max is the larger.

- **iPhone 14.** The iPhone 14 has a 6.1-inch OLED screen with 2532×1170-pixel resolution. OLED is the acronym for organic light-emitting diode; these screens are considered top of the range and have a wide viewing angle.
- **iPhone 14 Plus.** The iPhone 14 Plus has a 6.7-inch OLED screen with 2778×1284-pixel resolution.
- **iPhone 14 Pro.** The Pro has a 6.1-inch OLED screen with 2556×1179-pixel resolution.
- **iPhone 14 Pro Max.** The Pro Max has a 6.7-inch OLED screen with 2796×1290-pixel resolution.

As well as the four iPhone 14 models, Apple sells three older models: the iPhone 13, the iPhone 12, and the iPhone SE third generation.

- **iPhone 13.** Introduced in 2021, the iPhone 13 has a 6.1-inch screen with 1792×828-pixel resolution.
- **iPhone 12.** Introduced in 2020, the iPhone 12 has a 6.1-inch screen with 1792×828-pixel resolution. The iPhone 12 is similar in size and design to the iPhone 13 but contains slightly less powerful hardware and less memory.

Each of these six models has a design featuring thin bezels, rounded screen corners, and a “notch” cutout at the middle of the top edge of the screen. The notch contains the front camera and various sensors for features such as Face ID face recognition. The notch on the iPhone 14 Pro models changes shape to display various types of information and controls in a feature called Dynamic Island.

The third of the older iPhone models, the iPhone SE third generation, has a 4.7-inch screen with 1334×750-pixel resolution and an older design with two main differences from the newer designs. First, this phone has thicker bezels and no notch at the top of the screen; the front camera and its sensors are in the top bezel. Second, in the lower bezel, below the screen, is the Home button, a round button used for navigation and for the Touch ID fingerprint-recognition authentication system. Touch ID is easy to use and can be preferable to Face ID if you are wearing a face mask or other personal protective equipment.

The iPhone SE has long been popular among those with smaller hands, smaller pockets, or less need for a huge screen. Since the introduction of its first generation in 2016, the iPhone SE has been considered the cutest iPhone.

Understanding What Is Included in the Box

As of this writing, each iPhone box contains only the iPhone itself and a USB-C to Lightning cable for charging the iPhone and connecting it to a PC or a Mac.

Understanding Charging and Connectivity

Each iPhone features wireless charging, which you may find easier and more convenient than using a cable. You will need to get a wireless charger separately.

iPhone 14 models sold in the United States use eSIMs, virtual SIM cards that you manage electronically, rather than physical SIM cards, to connect to cellular networks. iPhone 14 models sold in some other markets use physical

SIM cards, as do all other current iPhone models, but can use one or more eSIMs as well.

All current iPhone models have 5G connectivity, enabling them to connect to fifth-generation cellular networks. 5G can be up to 100 times faster than 4G, but it is not yet widely available. Check the current and, if possible, future availability of 5G in the areas you will use your iPhone before using 5G as a deciding factor for buying an iPhone.

Understanding the Operating System

Each iPhone runs iOS 16, the latest operating system from Apple, which comes with a suite of built-in apps, such as the Safari web browser and the Mail e-mail app. If you buy an older iPhone model, you may need to upgrade it to iOS 16, but this is easy to do, and there is no charge for the update. The iPhone 8 and all later models — iPhone X, iPhone SE second generation and third generation, iPhone 11, iPhone 12, iPhone 13, and iPhone 14 — can run iOS 16.

Know Which Colors Are Available for Which iPhone Model

The iPhone 14 Pro models come in four colors: Space Black, Silver, Gold, and Deep Purple.

The iPhone 14 and iPhone 14 Plus come in five colors: Blue, Purple, Midnight, Starlight, and (PRODUCT)RED.

The iPhone 13 comes in six colors: Green, Pink, Blue, Midnight, Starlight, and (PRODUCT)RED.

The iPhone SE third generation comes in three colors: Starlight, Midnight, and (PRODUCT)RED.

In addition to physical size and key features, you should consider the storage capacity of the iPhone model you are thinking of buying. Having plenty of storage is especially important for shooting videos with your iPhone.

Having more storage enables you to install more apps and carry more music, movies, and other files with you; however, if you stream your music and movies, offload unused apps, and store your files online, you may not need a huge amount of storage.

Understanding the Cameras on iPhone Models

The iPhone 14 Pro models have a 48-megapixel main camera on the back, accompanied by a 12-megapixel Ultra Wide camera and a 12-megapixel Telephoto camera that switches between 2X and 3X magnification using the quad-pixel sensor. On the front is a 12-megapixel camera with depth-sensing features that enable the Face ID authentication and unlocking system.

The iPhone 14 and iPhone 14 Plus have dual 12-megapixel cameras on the back — Main and Ultra Wide. The iPhone 13 and iPhone 12 also have dual 12-megapixel rear cameras, but these are Ultra Wide and Wide. On the front, all these models have a 12-megapixel camera with depth-sensing features for Face ID.

The iPhone SE third generation has a single 12-megapixel camera on the back and a 7-megapixel camera on the front.

Compare the iPhone 14 Models with the Earlier iPhone Models

The iPhone 14 Pro models offer a substantial upgrade over the iPhone 13 Pro models, their direct predecessors, in

three key ways.

First, the iPhone 14 Pro models have Apple's A16 Bionic chip, which is faster and more powerful than the A15 Bionic chip used in the iPhone 13 Pro and iPhone 13. The A15 Bionic chip also powers the iPhone 14 and iPhone 14 Plus and the iPhone SE third generation.

Second, the iPhone 14 Pro models have brighter screens and slightly higher resolution than the iPhone 13 Pro models. The iPhone 14 Pro models have an Always-On display feature that displays information on the lock screen, plus the Dynamic Island feature for displaying context-sensitive information and controls.

Third, the 48-megapixel camera on the iPhone 14 Pro models is a huge improvement over the 12-megapixel camera on the iPhone 13 Pro models. Other camera improvements, including a larger sensor and better optical image stabilization, make the iPhone 14 Pro models the best choice for taking serious photos and videos.

The iPhone 14 and iPhone 14 Plus use the same A15 Bionic chip as the iPhone 13 models and have the same screen type, Super Retina XDR. The iPhone 12 has the A14 Bionic chip and a Super Retina XDR screen. The iPhone SE third generation has the A15 Bionic chip and the less sophisticated Retina HD screen.

All currently available iPhone models except the iPhone SE third generation have an IP68 rating, which means water resistance for up to 30 minutes in up to 6 meters of water — almost 20 feet. The iPhone SE third generation has an IP67 rating — up to 30 minutes in 1 meter of water, or just over three feet.

Evaluate iPhone Storage Capacity

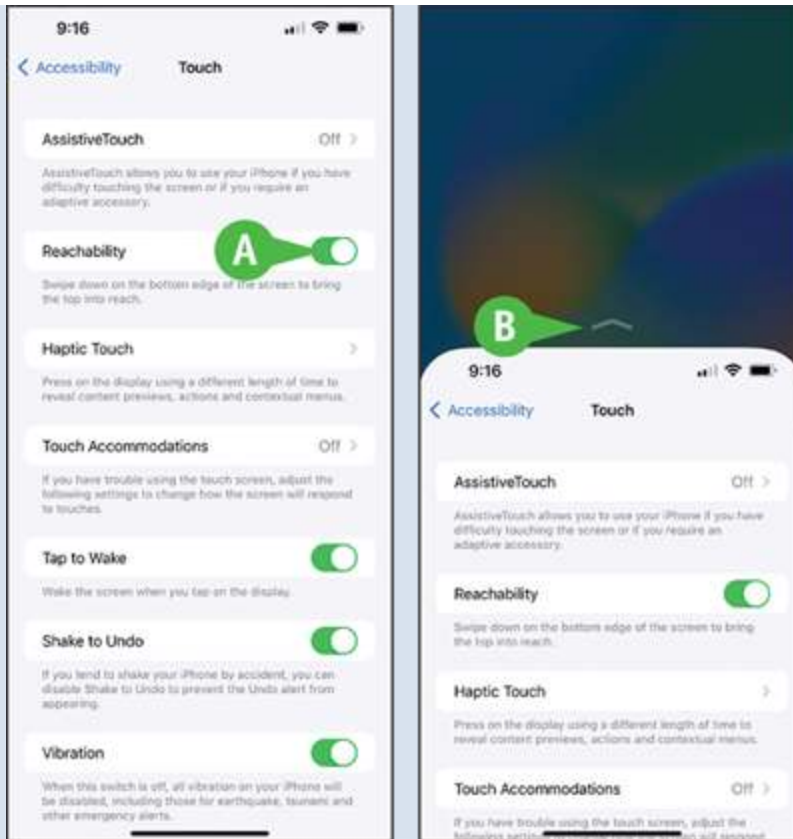

The iPhone models are available with different amounts of storage capacity. The following table shows the capacities with sample amounts of contents to give you some idea of what the amounts mean in real terms.

The iPhone 14 Pro models come in 128GB, 256GB, 512GB, and 1TB capacities. The iPhone 14, iPhone 14 Plus, and iPhone 13 come in 128GB, 256GB, and 512GB capacities. The iPhone 12 and iPhone SE third generation come in 64GB, 128GB, and 256GB capacities.

Higher capacities command substantially higher prices, so you must decide how much you are prepared to spend. Generally speaking, higher-capacity devices get more use in the long run and are worth the extra cost.

Capacity	Songs	Photos	Video
64GB	5,000	4,000	10 hours
128GB	10,000	8,000	20 hours
256GB	20,000	16,000	40 hours
512GB	40,000	32,000	80 hours
1TB	80,000	64,000	160 hours

Understanding the Reachability Feature

iOS includes a feature called Reachability to help you use your iPhone with one hand when necessary. With the Reachability feature enabled, swipe down on the bottom edge of the screen to slide the screen down so that you can easily reach the top of it. On the iPhone SE, you double-tap **Home** — double-tap rather than double-press — to slide the screen down. After you give a command, the screen slides back up again; if you decide not to give a command, tap **Restore** (B) (🔼) to slide the screen back up; on an iPhone SE, double-tap **Home** again. Alternatively, wait a few seconds, and the iPhone slides the screen back up automatically.

To enable Reachability, first tap **Settings** (⚙️), tap **Accessibility** (♿️), and then tap **Touch** (👉). Near the top of the Touch screen, set the **Reachability** switch (A) to On (🟢).

Understanding the Live Photos Feature

All of the current iPhone models include a feature called Live Photos that enables you to capture short sections of video before and after a still photo. After capturing the Live Photo, you can make the video segments play by tapping and holding the photo.

You can view your Live Photos on other Apple devices, such as your iPad or your Mac. You can also use a Live Photo as the wallpaper for your iPhone's lock screen.

Using Your iPhone's Controls

With the touchscreen used for most actions, the iPhone 14 models have only four other hardware controls: the Side button in the middle of the right side; the Ringer On/Off switch at the top of the left side; and the Volume Up button and Volume Down button below the Ringer On/Off switch. This section illustrates and explains these controls, plus the methods for unlocking the iPhone and locking it again.

Identify the Hardware Controls
