Acknowledgments

First, all glory and praise go to God, who through His Son, Jesus Christ, makes all things possible and gives us the gift of eternal life.

Many thanks go to the fantastic team of people at Sybex for their outstanding work on this project. Thanks to Kenyon Brown, the senior acquisitions editor, for offering us the opportunity to work on this book. Also thanks to Stephanie Barton, the development editor, for keeping things on track and making the book more presentable. Thanks, Steph, for all your hard work and diligence. The technical proofreaders, Kevin E. Ryan and Jason Eckert, did a wonderful job of double-checking all of the work in the book in addition to making suggestions to improve the content. Also our appreciation goes out to David B. Clinton for taking the reins as technical editor near the close of the project and offering his terrific advice. Thanks also goes to the young and talented Daniel Anez (theanez.com) for his illustration work. We would also like to thank Carole Jelen at Waterside Productions, Inc., for arranging this opportunity for us and for helping us out in our writing careers.

Christine would particularly like to thank her husband, Timothy, for his encouragement, patience, and willingness to listen, even when he has no idea what she is talking about. Christine would also like to express her love for Samantha and Cameron, "May God bless your marriage richly."

Rich would particularly like to thank his wife, Barbara, for enduring his grouchy attitude during this project and helping to keep up his spirits with baked goods.

About the Authors

Christine Bresnahan, CompTIA Linux+, LPIC-1, started working with computers more than 30 years ago in the IT industry as a system administrator. Christine is an adjunct professor at Ivy Tech Community College where she teaches Linux certification and Python programming classes. She also writes books and produces instructional resources for the classroom.

Richard Blum, CompTIA Linux+ ce, CompTIA Security+ ce, LPIC-1, has also worked in the IT industry for more than 30 years as both a system and network administrator, and he has published numerous Linux and open-source books. Rich is an online instructor for Linux and web programming courses that are used by colleges and universities across the United States. When he is not being a computer nerd, Rich enjoys spending time with his wife, Barbara, and his two daughters, Katie and Jessica.

Introduction *xxix*

Assessment Test *xlii*

Part I Gathering Your Tools 1

Chapter 1 Preparing Your Environment 3

Setting Up a Learning Space 4
- Using That Old Laptop 4
- Creating a Virtualized Environment 5
- Jumping to the Cloud 7

Exploring Linux Distributions 8
- Looking at CentOS 9
- Looking at Ubuntu 10
- Looking at openSUSE 12
- Looking at Fedora 13

Locating a Terminal 14
Summary 14

Chapter 2 Sifting Through Services 15

What Is a Linux Server? 16
- Launching Services 17
- Listening for Clients 18

Serving the Basics 19
- Web Servers 20
- Database Servers 21
- Mail Servers 22

Serving Local Networks 24
- File Servers 25
- Print Servers 26
- Network Resource Servers 26

Implementing Security 29
- Authentication Server 29
- Certificate Authority 30
- Access Server (SSH) 31
- Virtual Private Networks 31
- Proxy Server 32
- Monitoring 32

Improving Performance 32
Clustering 32
Load Balancing 33
Containers 33
Summary 33
Exam Essentials 34
Review Questions 35

Chapter 3 Managing Files, Directories, and Text 39

Handling Files and Directories 40
Viewing and Creating Files 40
Copying and Moving Files 45
Removing Files 52
Linking Files and Directories 55
Establishing a Hard Link 55
Constructing a Soft Link 57
Reading Files 59
Reading Entire Text Files 59
Reading Text File Portions 61
Reading Text File Pages 65
Finding Information 66
Exploring File Differences 67
Using Simple Pinpoint Commands 69
Using Intricate Pinpoint Commands 73
Summary 77
Exam Essentials 77
Review Questions 78

Chapter 4 Searching and Analyzing Text 83

Processing Text Files 84
Filtering Text 84
Formatting Text 89
Determining Word Count 93
Redirecting Input and Output 95
Handling Standard Output 95
Redirecting Standard Error 96
Regulating Standard Input 98
Piping Commands 100
Creating Here Documents 102
Creating Command Lines 103
Editing Text Files 105
Appreciating Text Editors 105
Learning About Stream Editors 110

Summary 116
Exam Essentials 117
Review Questions 118

Part II Starting Up and Configuring Your System 123

Chapter 5 Explaining the Boot Process 125

The Linux Boot Process 126
Following the Boot Process 126
Viewing the Boot Process 127
The Firmware Startup 128
The BIOS Startup 128
The UEFI Startup 129
Linux Bootloaders 130
GRUB Legacy 131
GRUB2 134
Alternative Bootloaders 136
System Recovery 137
Kernel Failures 137
Root Drive Failure 139
Summary 141
Exam Essentials 141
Review Questions 143

Chapter 6 Maintaining System Startup and Services 147

Looking at *init* 148
Managing systemd Systems 149
Exploring Unit Files 150
Focusing on Service Unit Files 152
Focusing on Target Unit Files 157
Looking at *systemctl* 159
Examining Special systemd Commands 162
Managing SysV init Systems 167
Understanding Runlevels 168
Investigating SysV init Commands 171
Digging Deeper into systemd 176
Looking at systemd Mount Units 176
Exploring Automount Units 178
Summary 179
Exam Essentials 179
Review Questions 181

Chapter 7 Configuring Network Connections 187

Configuring Network Features 188
Network Configuration Files 188
Graphical Tools 191
Command-Line Tools 193
Basic Network Troubleshooting 201
Sending Test Packets 201
Finding Host Information 202
Advanced Network Troubleshooting 205
The *netstat* Command 205
Examining Sockets 208
Summary 209
Exam Essentials 210
Review Questions 212

Chapter 8 Comparing GUIs 217

Focusing on the GUI 218
Getting to Know GNOME 219
Probing KDE Plasma 221
Considering Cinnamon 223
Making Acquaintance with MATE 225
Understanding Unity 227
Setting Up Accessibility 228
Serving Up the GUI 231
Figuring Out Wayland 232
Examining X11 234
Using Remote Desktops 235
Viewing VNC 236
Grasping Xrdp 238
Exploring NX 239
Studying SPICE 240
Forwarding 240
Local 242
Remote 243
Tunneling Your X11 Connection 244
Summary 245
Exam Essentials 245
Review Questions 247

Chapter 9 Adjusting Localization Options 253

Understanding Localization 254
Character Sets 254
Environment Variables 255

Setting Your Locale 256
Installation Locale Decisions 256
Changing Your Locale 257
Looking at Time 259
Working with Time Zones 259
Setting the Time and Date 260
Watching System Time 264
Summary 265
Exam Essentials 266
Review Questions 267

Part III Managing Your System 273

Chapter 10 Administering Users and Groups 275

Managing User Accounts 276
Adding Accounts 276
Maintaining Passwords 288
Modifying Accounts 290
Deleting Accounts 292
Managing Groups 294
Setting Up the Environment 297
Perusing Bash Parameters 298
Understanding User Entries 299
Grasping Global Entries 300
Querying Users 300
Exploring the *whoami* Utility 300
Understanding the *who* Utility 301
Identifying with the *id* Program 302
Displaying Access History with the *last* Utility 303
Managing Disk Space Usage 304
Summary 308
Exam Essentials 308
Review Questions 310

Chapter 11 Handling Storage 315

Storage Basics 316
Drive Connections 316
Partitioning Drives 317
Automatic Drive Detection 317
Partitioning Tools 318
Working with *fdisk* 318
Working with *gdisk* 320
The GNU *parted* Command 322
Graphical Tools 322

Understanding Filesystems 323
The Virtual Directory 324
Maneuvering Around the Filesystem 326
Formatting Filesystems 326
Common Filesystem Types 326
Creating Filesystems 328
Mounting Filesystems 329
Manually Mounting Devices 329
Automatically Mounting Devices 330
Managing Filesystems 331
Retrieving Filesystem Stats 331
Filesystem Tools 332
Storage Alternatives 333
Multipath 333
Logical Volume Manager 334
Using RAID Technology 336
Summary 338
Exam Essentials 338
Review Questions 340

Chapter 12 Protecting Files 343

Understanding Backup Types 344
Looking at Compression Methods 346
Comparing Archive and Restore Utilities 349
Copying with *cpio* 349
Archiving with *tar* 352
Duplicating with *dd* 357
Replicating with *rsync* 359
Securing Offsite/Off-System Backups 362
Copying Securely via *scp* 362
Transferring Securely via *sftp* 363
Checking Backup Integrity 366
Digesting an MD5 Algorithm 366
Securing Hash Algorithms 367
Summary 368
Exam Essentials 368
Review Questions 370

Chapter 13 Governing Software 373

Working with Source Code 374
Downloading Source Code 374
Bundling Source Code Packages 375
Compiling Source Code 379

Packaging Applications 380
Installing and Managing Packages 381
Understanding Repositories 385
Summary 392
Exam Essentials 393
Review Questions 394

Chapter 14 Tending Kernel Modules 397

Exploring Kernel Modules 398
Installing Kernel Modules 402
Removing Kernel Modules 404
Summary 405
Exam Essentials 405
Review Questions 407

Part IV Securing Your System 409

Chapter 15 Applying Ownership and Permissions 411

Looking at File and Directory Permissions 412
Understanding Ownership 412
Controlling Access Permissions 414
Exploring Special Permissions 417
Managing Default Permissions 418
Access Control Lists 420
Context-Based Permissions 422
Using SELinux 423
Using AppArmor 427
Understanding Linux User Types 430
Types of User Accounts 430
Escalating Privileges 430
Restricting Users 431
Summary 435
Exam Essentials 436
Review Questions 437

Chapter 16 Looking at Access and Authentication Methods 439

Getting to Know PAM 440
Exploring PAM Configuration Files 440
Enforcing Strong Passwords 444
Locking Out Accounts 447
Limiting Root Access 451

Exploring PKI Concepts 452
Getting Certificates 453
Discovering Key Concepts 453
Securing Data 454
Signing Transmissions 455
Using SSH 455
Exploring Basic SSH Concepts 456
Configuring SSH 458
Generating SSH Keys 460
Authenticating with SSH Keys 462
Authenticating with the Authentication Agent 464
Using SSH Securely 466
Using VPN as a Client 468
Summary 469
Exam Essentials 469
Review Questions 471

Chapter 17 Implementing Logging Services 473

Understanding the Importance of Logging 474
The syslog Protocol 474
The History of Linux Logging 476
Basic Logging Using rsyslog 477
Configuration 477
Making Log Entries 479
Finding Event Messages 479
Journaling with *systemd-journald* 480
Configuration 480
Viewing Logs 481
Summary 483
Exam Essentials 484
Review Questions 485

Chapter 18 Overseeing Linux Firewalls 487

Providing Access Control 488
Looking at Firewall Technologies 490
Familiarizing Yourself with firewalld 491
Investigating iptables 495
Understanding UFW 500
Forwarding IP Packets 505
Dynamically Setting Rules 506
DenyHosts 506
Fail2ban 506
IPset 507

Summary 508
Exam Essentials 508
Review Questions 510

Chapter 19 Embracing Best Security Practices 513

User Security 514
Authentication Methods 514
Multifactor Authentication 516
Unique User Accounts 517
Restricting the root Account 517
System Security 518
Separation of Data 518
Disk Encryption 519
Restricting Applications 520
Preventing Unauthorized Rebooting 520
Restricting Unapproved Jobs 522
Banners and Messages 523
Restricting USB Devices 523
Looking for Trouble 524
Auditing 524
Network Security 525
Denying Hosts 525
Disabling Unused Services 525
Changing Default Ports 526
Using Encryption on the Network 526
Summary 528
Exam Essentials 528
Review Questions 530

Part V Troubleshooting Your System 533

Chapter 20 Analyzing System Properties and Remediation 535

Troubleshooting the Network 536
Exploring Network Issues 536
Viewing Network Performance 540
Reviewing the Network's Configuration 546
Troubleshooting Storage Issues 549
Running Out of Filesystem Space 549
Waiting on Disk I/O 550
Failing Disks 553
Troubleshooting the CPU 554
Troubleshooting Memory 556
Swapping 556
Running Out of Memory 560

Surviving a Lost root Password 560
