# ABOUT THE AUTHORS

**REZA ALIREZAEI** is the founder and president of Development Horizon, a Microsoft Gold Partner based in Toronto. Reza has been a Microsoft Most Valuable Professional (MVP) for SharePoint since 2006. In addition to consulting, Reza has a decade of experience in training and speaking for corporations and the SharePoint community. He has authored several SharePoint books, papers, and online articles. Reza blogs at <http://blogs.devhorizon.com/reza> and can be reached at [reza@devhorizon.com](mailto:reza@devhorizon.com).

**BRENDON SCHWARTZ** is a SharePoint expert with over 10 years of SharePoint experience, starting in the early days of the product. Known as an expert on collaboration, social computing, enterprise content management, business process management, and application development, Brendon has presented at conferences and built innovative product solutions. He has managed projects for many clients, including Fortune 500 companies such as AT&T, Coca-Cola, AutoTrader.com, and The Home Depot. While leading a team for one of the first Microsoft-hosted solutions for Coca-Cola Enterprises, he helped shape the future of Office 365. Brendon has proudly received the Microsoft MVP award for both ASP.NET and SharePoint. An avid writer on SharePoint, he has authored numerous articles and books including *Professional SharePoint 2007 Development* and *Social Computing with Microsoft SharePoint 2007*. Brendon enjoys spending time with his wife, son, and new daughter.

**MATT RANLETT** is a SharePoint Server MVP and works as a solution architect and consulting practice lead with Slalom Consulting. When he's not organizing or presenting at user group-related events, Matt writes and edits white papers, magazine articles, and books on SharePoint.

**SCOT HILLIER** is an independent consultant and Microsoft SharePoint Most Valuable Professional focused on creating solutions for Information Workers with SharePoint, Office, and related technologies. He is the author/coauthor of 18 books on Microsoft technologies including *Inside SharePoint 2013* and *App Development in SharePoint 2013*. Scot splits his time between consulting on SharePoint projects, speaking at SharePoint events like the Microsoft SharePoint Conference, and delivering training for SharePoint developers through Critical Path Training. Scot is a former U. S. Navy submarine officer and graduate of the Virginia Military Institute. Scot can be reached at [scot@scothillier.net](mailto:scot@scothillier.net).

**BRIAN WILSON** is a SharePoint solution and information architect and director of WiredLight, a SharePoint solutions business. With 15 years of experience (including four years as a Senior Consultant in the SharePoint and Information Worker team in Microsoft Consulting Services), Brian works with some of Microsoft's largest customers architecting and developing solutions for enterprise environments using SharePoint technologies. Since the first version of SharePoint, he has been involved in a variety of leading-edge SharePoint projects for clients in the USA, Europe, Asia, and South Africa across many industries. Brian provides innovative design and development expertise through WiredLight, which focuses on providing consultancy, products, and solutions for SharePoint. When he gets the time, he enjoys skiing, scuba diving, and watching a great game of rugby. For more information about Brian, see <http://www.wiredlight.net/> or his LinkedIn profile at <http://uk.linkedin.com/in/bkvwilson>.

**JEFF FRIED** is the CTO at BA Insight, focused on the development of search-based applications with SharePoint. Jeff is a frequent speaker and writer in the industry, holds 15 patents, has authored more than 50 technical papers, and has led the creation of pioneering offerings in next generation search engines, networks, and contact centers

**PAUL SWIDER** is an international speaker, trainer, and freelance consultant. In addition, he is the founder of the Charleston SharePoint Users Group and an accomplished entrepreneur straight from a barrier island near Charleston, SC where Paul also chases the tides and winds as an avid boater and sailor. Paul is involved in many community and philanthropic efforts including a founding member of Sharing the Point, an international effort which offers free SharePoint training opportunities in emerging markets. Seventeen years of software consulting experience combined with many Microsoft certifications and speaking credentials has made Paul an authority in the SharePoint community. As an MCT, Paul has trained and consulted thousands of SharePoint administrators, developers, and architects.

## ABOUT THE TECHNICAL EDITORS

**ANDY AU** is the team lead at the consulting firm Development Horizon, a Microsoft Gold Certified Partner for SharePoint based in Toronto, Canada. Andy has over eight years of experience in which six years were spent working with SharePoint 2003, 2007, and 2010. Andy has been entrusted with the leadership and development of many solutions in his career, and he holds Microsoft Certified Technology Specialist (MCTS), Microsoft Certified IT Professional (MCITP), and Microsoft Certified Professional Developer (MCPD) certificates. In his free time, Andy enjoys watching sports and spending time relaxing with family and friends.

**MEHRDAD MEHRJOO** has dedicated the last seven years of his career to working with SharePoint. Mehrdad has become so well known as the guy who can make almost any software work and integrate with SharePoint. He is currently working in Development Horizon as a senior SharePoint consultant where he leads the foundation and infrastructure design and development practice. He is a recognized Microsoft Certified Technology Specialist (MCTS), Microsoft Certified IT Professional (MCITP), and Microsoft Certified Professional Developer (MCPD). Mehrdad enjoys spending time with his wife and son.

**SIAVASH FATHI** is a senior SharePoint consultant in Development Horizon. Siavash is passionate about SharePoint apps and is focused on client-side and remote programming. Besides SharePoint, Siavash likes to do research in robotics and artificial intelligence (AI) and has published several papers in those fields. Siavash holds Microsoft Certified Technology Specialist (MCTS), Microsoft Certified IT Professional (MCITP), Microsoft Certified Professional Developer (MCPD), and Certified ScrumMaster (CSM) certificates.

# ACKNOWLEDGMENTS

**WRITING A BOOK IS NEVER AN EASY TASK.** It takes a lot of people who don't get their name on the front of the book but who put in a tremendous amount of work. Thanks to my wife Heidi, who makes this all possible. Your sacrifices and willingness to take care of the family on your own never stop amazing me. Although our kids are too young to know that Daddy going to work all day on Saturdays and Sundays is not normal, I am very grateful for how wonderful our children are. No person is complete without a good support system, and I would like to thank everyone I have worked with who has pushed me to become better. First, thanks to all of our team members at Wrox for making this possible — Mary, Kelly, and all of the editors, you all rock! I'd like to thank my friend Aaron Richards for his innovative thinking and endless pursuit of solutions and InfoPath. Thanks also to my technical support system that I reach out to, such as Andrew Connell, Douglas McDowell, Robert Bogue, and Doug Ware. Doug Ware never lets me down when I have tough questions and need a blog post to explain something. Thanks to all of the SharePoint MVPs for being great friends and the best MVP community there is. And thanks for the years of encouragement from my good friends Matt Ranlett, Jeremy Howard, Jerry Pattenaude, and Chris Haldeman. A big thanks to the SharePoint team and their willingness to always provide an answer. Finally, I want to thank some of the people who have had an impact in helping me grow, learn, and keep on track, including my parents, Doug Turnure, Aaron Cutlip, Dan Attis, and countless others.

—BRENDON SCHWARTZ

**FIRST AND FOREMOST I NEED TO THANK** my family for putting up with the endless hours researching, writing, and editing book content. I also need to thank the talented team of editors and reviewers at Wrox who worked tirelessly to make this book a reality.

—MATT RANLETT

**A BIG THANK YOU TO BILL BAER** and Vesa Juvonen for your contribution to various chapters in this book. Your advice, expertise and contribution helped the writing team produce a high-quality SharePoint 2013 book. Thank you! To the SharePoint and Office product teams, and to all of you in the SharePoint Community: To standing on the shoulders of giants...!

—BRIAN WILSON

**THANKS TO MY WIFE AND FAMILY** for their support, to my SharePoint friends for their inspiration, and to the editors of this book for their hard work and consistent pushing.

—JEFF FRIED

# INTRODUCTION

**IF YOU ALREADY HAVE SOME** exposure to the SharePoint platform and its complementary technologies, you probably know that SharePoint is a versatile platform for building solutions that address a wide range of business needs. The growing importance and use of SharePoint in general has played an important role in the investment Microsoft has made in this platform over the years. Today, the latest version of this great product is SharePoint 2013!

There are many new features and improvements made to the core platform in SharePoint 2013. However, what is the most exciting addition is the new app model that enables developers to build apps and deploy them in isolation with few or no dependencies on any other software on the platform where it is installed and with no custom code that runs on the SharePoint servers.

In SharePoint 2013, the emphasis is more on the cloud programming and standard web technologies such as JavaScript and HTML. In that respect, it is fair to say that the majority of other changes made to the SharePoint 2013 platform are made to support this new app development model.

## WHO THIS BOOK IS FOR

This book is for anyone interested in developing applications on top of SharePoint 2013 or SharePoint Online in Office 365. Although some knowledge is assumed about SharePoint, the examples are comprehensive and easy to follow if you have previous knowledge of web development and development tools.

## WHAT THIS BOOK COVERS

SharePoint 2013, just like its predecessors, is a big product and this book is a big, diverse book. So, before you dive into the book, here's a little about what each chapter entails and what you can expect after you have read the chapter.

This book starts off with giving you an architectural overview in SharePoint and then covers the new features that matter to developers in Chapters 1 and 2. Chapters 3 and 4 walk you through the tooling experience in SharePoint 2013, as well as some important information about Application Life Cycle Management (ALM) in SharePoint 2013.

Due to the importance of the app model in SharePoint 2013, Chapters 4 through 7 are dedicated to app development and the cloud.

Chapters 8 through 15 walk you through some of the important areas in SharePoint 2013, many of which received considerable updates. This section also includes Chapter 11, "Using InfoPath with SharePoint 2013." Because there is some uncertainty about the future of InfoPath in the SharePoint

stack and there are customers with existing investments, that chapter will hopefully shed some light to help developers make better decisions as they move forward.

Chapters 16 through 19 are focused on Business Intelligence (BI) and SharePoint. BI in SharePoint 2013 provides better capabilities in analysis, reporting, dashboarding, and visualizations compared to SharePoint 2010. This is made available through better BI tools and tighter integration between SharePoint, Microsoft Office applications, and SQL Server 2012.

## HOW THIS BOOK IS STRUCTURED

This book is structured to build logically on the skills you learn as you progress through it. After the initial introduction and base platform chapters, the book moves into the advanced part of the platform. Each chapter builds on knowledge acquired from earlier in the book, so you should read through the chapters in succession or at least read the introductory and platform chapters before reading later chapters in the book.

## WHAT YOU NEED TO USE THIS BOOK

To get the most of this book, and because this is a book for developers, you need a development environment. There are two ways to do this:

- Build your own development machine. The best resource for building a full-fledged development machine is documented at MSDN at <http://msdn.microsoft.com/en-us/library/ee554869.aspx>.
- Use an Office 365 developer site. This shortens your setup time and gets you started in less than five minutes. In this setup all you need is to sign up for a developer site at <http://msdn.microsoft.com/en-us/library/fp179924.aspx>.

If you choose to use an Office 365 developer site, please note that you can also deploy Napa, which is an Office 365 exclusive development tool, to your developer site. This allows you to build SharePoint-hosted apps without installing Visual Studio 2012 and Office Developer Tools for Visual Studio 2012 on your development computer.

Last, but certainly not least, Microsoft has released many code samples for SharePoint 2013 covering almost every area of SharePoint development. You can find these code samples at <http://msdn.microsoft.com/en-us/library/jj901637.aspx>.

## CONVENTIONS

To help you get the most from the text and keep track of what's happening, we've used a number of conventions throughout the book.
