To all those who employ fluorescence in their working lives,

We hope you find this volume a useful resource,

Chris D. Geddes and Joseph R. Lakowicz

September 2005

Preface

The Who's Who in Fluorescence 2006 is the 4th volume of the Who's who series. The previous three volumes (2003 - 2005) have been very well received indeed, with 1000's of copies being distributed around the world, through conferences and workshops, as well as through internet book sites.

In the last 3 years a great many of you have sent comments and suggestions, we thank you all. We have tried to accommodate many of these into the new 2006 volume. This new 2006 volume features some 366 entries from no fewer than 36 countries. We have received 48 new entries this year, and deleted 62 entries that were not updated by contributors from past years. Some older entries were also retained by the editors. In addition, we have a continued strong company support, which will enable us to further disseminate the volume in 2006. In this regard we especially thank the instrumentation companies for their continued support, where without their financial contributions; it is likely that the volume would not be the success it is today.

We introduced a new author publication statistic into the 2005 volume, the Author Impact Measure (AIM) number. While voluntary, this number is intended to reflect an author's progress in past years. The AIM number simply summates the *impact number* (from the ISI database) of Journals published in, in that year, multiplied by the frequency of those publications. From those who chose to participate, we can see most impressive AIM numbers, in some instances, greater than 70 for an individual year. Last year, some 37 AIM numbers were submitted and listed, this year, the number submitted has risen to 88.

Finally, we would like to thank Caroleann Aitken for both the architecture and the typesetting of the entire volume in a timely fashion. Thanks also go to Aaron Johnson and Kate Davis at Springer, for helping to make this volume possible, many thanks.

Dr Chris D. Geddes,
Dr Joseph R. Lakowicz,
Baltimore, USA.
October 2005.

Specialty Keywords: Lanthanide, Fluoroimmunoassay, NIR
Dyes.

AIM 2004 = 11.5

Some topics of interest are the use of lanthanide chemistry, such as dry-reagent chemical technology or NIR emitting lanthanide ions among others, and also the study of new reactions to increase the reactivity of long-wavelength fluorophores. Research is also focused on the development of new homogeneous fluoroimmunoassay methods using kinetic methodology and immunoaffinity chromatography methods with fluorescence detection. These have been applied to different areas such as clinical, environmental and food analysis.

M.P. Aguilar-Caballo and A. Gómez-Hens (2004). Long-wavelength fluorophores: new trends in their analytical use. *Trends Anal. Chem.* **23**(2), 127-136.

Jihad-Rene.Albani@univ-lille1.fr

Specialty Keywords: Structure, Dynamics, Fluorescence Fingerprints.

We characterize structure and dynamics of proteins. For example, we were able to characterize the global spatial structure of α_1 – acid glycoprotein showing the presence of a pocket where ligands can bind (Albani, 2004, Carbohydrate Research). Also, we showed that the carbohydrate residues of the protein possess a spatial structure (Albani et al. 2000, Carbohydrate Research). Also, we apply fluorescence to characterize species and varieties in animals and vegetals (Albani et al. 2003, Photochem. Photobiol).

Specialty Keywords: Fluorescence Sensing, Molecular
Imprinted Polymers, Laser-induced Fluorescence.

The Fluorescence Spectroscopy Lab at ERDC is engaged in basic and applied research in fluorescence sensing. This research is focused on the development and modeling of fluorophores for recovery by remote sensing. The Lab guides the development of organic (living) and inorganic materials that may be used for the targeting and detection of harmful agents or environmental threats of relevance to the military or civil communities. The Lab has the capabilities to measure both steady-state and lifetime (decay) fluorescence spectra for fluorophores using state-of-the art spectrometers and lasers including a frequency domain lifetime spectrofluorometers. The Lab has recently incorporated instruments to characterize near infrared fluorescence and apply multi-photon excitation to targets of interest.
