

Stephan Klemm

Interactions between the Craniomandibular System and Cervical Spine

The influence of an unilateral change of occlusion on the upper cervical range of motion

Bachelor Thesis

I Acknowledgement

I would like to give many thanks Mrs. Dipl.-Psych. Astrid Becker-Woitag, Mrs. Sabine Plosteiner, Dr.-Ing. Walter Klemm, Dr. med. Martin Vogel and Sebastian Zang for their technical assistance. Many thanks to the dance team Funky Jam Take Three headed by Mr. Oliver Zschörner, too.

Table of Contents

I.	Acknowledgement	
II.	Table of Contents	
III.	Abstract	
1.	Introduction	7
2.	Theoretical background	9
2.1.	Embryology	9
2.1.1.	Biological development and evolution of the jaw, facial and cervical regions	10
2.1.1.1.	The gill system	10
2.1.1.2.	Differentiation of tissues in human gill arches	10
2.1.1.3.	Gill arch innervation in humans	13
2.1.1.3.1.	CMS and anterior CS region	13
2.1.1.3.2.	Pinna and posterior CS region	14
2.2.	Anatomy of the human temporomandibular joint	16
2.2.1.	Neuroanatomical relationships between the CMS and the upper portion of the CS	17
2.2.1.1.	The nervus trigeminus pathway	17
2.2.1.2.	The area innervated by the nervus trigeminus	18
2.2.1.3.	Nervus trigeminus convergences with other areas	19
2.2.1.4.	Plexus cervicalis and its relationship to the upper CS	21
2.2.2.	Musculature in the CMS region	22
2.2.2.1.	The CMS musculature	22
2.2.2.1.1.	"True" masticatory muscles	22
2.2.2.1.2.	Suprahyoid musculature, muscoli suprahyoidei	23
2.2.2.1.3.	Mimic musculature in the oral region	23
2.2.2.2.	Musculature in the CS region	24
2.2.2.2.1.	Prevertebral, lateral and posterior cervical spinal musculature:	24
2.2.2.2.2.	Suboccipital musculature	26
2.2.2.3.	Functional interactions between the masticatory musculature and the anterior and posterior neck musculature.	28
2.2.3.	Functional connections between the CMS, CS and shoulder girdle regions	29
2.2.3.1.	Head posture	30
2.2.3.2.	Mandibular posture	31

3.	Empirical section	31
3.1.	Investigations on neuronal interactions between areas innervated by the trigeminus and the innervation of the upper cervical areas.	32
3.1.1.	Sensory neuronal interactions between the CMS and CS regions	32
3.1.2.	Neuronal motor interactions between the CMS and CS regions	34
3.2.	Craniomandibular dysfunction	36
3.2.1.	Historical background for CMD	36
3.2.2.	Definition and diagnostics for CMD	37
3.2.3.	Overview of investigations in cases of functional impairment of the CMS.	39
3.3.	Pathophysiology of the CMS and the upper CS region in humans	41
3.4.	Biomechanical connections between the CCS and CMS	43
4.	Aims of the current study and hypotheses	44
5.	Material and methods	45
5.1.	Definition of the exclusion criteria	46
5.2.	Sample	47
5.3.	Questionnaire and clinical investigation of the CS region	48
5.3.1.	Questionnaire A: Sociodemographic data, pain assessment and measurement of the maximum opening of the mouth	48
5.3.2.	Questionnaire B: Determination of the exclusion criteria (B1) and questioning of the subjects on subjectively perceived tension (B2)	49
5.4.	Experimental design and measurements	49
5.4.1.	Experimental design	50
5.4.2.	Chronological sequence of the entire experimental design depicted using a flow chart	52
5.4.3.	Description of an individual measurement	53
5.4.3.1.	Introduction, fitting of the metal foil, warming up	53
5.4.3.2.	Conduct of analysis of mobility in the CS	53
5.4.3.2.1.	Preparations for the measurement	54
5.4.3.2.2.	The CMS 70 P hardware	54
5.4.3.2.3.	Experimental protocol using the CMS 70 P	56
5.4.3.2.4.	Software	57
6.	Results and interpretation	58
6.1.	Demographic data	58
6.2.	Intergroup comparison of demographic data	59

6.3.	General evaluation of the raw data on baseline measurements	59
6.4.	Evaluation of the baseline measurements for each group	60
6.5.	Statistical analysis of measurements made under experimental conditions	61
6.6.	Results from the questionnaires on subjective perception of tension	65
6.7.	Evaluation of the hypotheses	66
7.	Discussion	66
7.1.	Discussion of the findings with reference to the theoretical and empirical research background and their clinical relevance	67
7.2.	Discussion of errors	68
7.3.	Comparisons with other studies	71
8.	Conclusions	74
8.1.	Study design	74
8.2.	Results of the current investigation	74
9.	References	76
Appendix A:	Questionnaire A for a study of the maxillary joint	83
Appendix B:	Raw data 1 from Questionnaire A and from the motion analysis of the upper CS with the Zebris-CMS 70 P device	84
Appendix C:	Questionnaire B1: Acquisition of excluding criteria	85
Appendix D:	Raw data 2 from Questionnaire B1	86
Appendix E:	Questionnaire B2: Estimates from the subjects about the flexibility of the spine and the tension in the maxillary region	87
Appendix F:	Raw data 3 from Questionnaire B2	88
Appendix G:	Introduction and warming-up of the probationers in order to adapt the body for the measurement of the occlusion.	89
Appendix H:	Instruction to the measurement of the mobility of the CS	90
Appendix I:	List of figures	91
Appendix J:	List of tables	92
