Advances in Food Applications for High Pressure Processing Technology

SpringerBriefs in Food, Health, and Nutrition

Springer Briefs in Food, Health, and Nutrition present concise summaries of cutting edge research and practical applications across a wide range of topics related to the field of food science, including its impact and relationship to health and nutrition. Subjects include: Food Chemistry, including analytical methods; ingredient functionality; physic-chemical aspects; thermodynamics Food Microbiology, including food safety; fermentation; foodborne pathogens; detection methods Food Process Engineering, including unit operations; mass transfer; heating, chilling and freezing; thermal and non-thermal processing, new technologies Food Physics, including material science; rheology, chewing/mastication Food Policy And applications to: Sensory Science Packaging Food Quality Product Development We are especially interested in how these areas impact or are related to health and nutrition. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Typical topics might include:

- A timely report of state-of-the art analytical techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- An in-depth case study
- A presentation of core concepts that students must understand in order to make independent contributions

Contents

1	Introduction and Advances in HPP Equipment and Packaging Material	1
1.1	Introduction to HPP Technology	1
1.2	Working Mechanism of HPP Technology	4
1.3	HPP Industrial Equipment Manufacturers	6
1.4	Types of Packaging Material Used for HPP Foods	9
	References.	12
2	Applications of HPP for Microbial Food Safety.	15
2.1	Microbial Inactivation by HPP.	15
2.2	Factors Affecting Microbial Inactivation	19
2.2.1	Process Parameters.	19
2.2.2	Microbial Characteristics.	20
2.2.3	Influence of Substrate Composition, pH, and Water Activity for Inactivation of Microorganisms	20
2.2.4	Species and Strain Variation Effects on Microbial Inactivation.	21
2.2.5	Substrate Composition.	21
2.2.6	Effect of Temperature	23
	References.	26
3	Applications of HPP for Improving the Shelf Life and Quality of Food Products	31
3.1	Fruit and Vegetable Products	31
3.2	Meat Products	35
3.3	Dairy Products	37
3.4	Fermented Food Products	38
3.5	Baby Food Products.	38
3.6	Human Donor Milk	42
	References.	43

4	Applications of HPP for Improved Functionality of Food Products	47
4.1	Effect of HPP on Food Allergenicity	47
4.2	HPP Preservation of Lipids	48
4.3	Effect of HPP on Reduction of Salt Content	50
4.4	HPP Application for Sea Foods	53
	References.	54
5	Applications of HPP for Extraction of Bioactive Compounds	59
5.1	Effect of HPP on Recovery of Bioactive Compounds	59
5.1.1	Polyphenols	59
5.1.2	Carotenoids	62
5.1.3	Glucosinolates	63
5.2	Effect of HPP on Bioavailability and Bioaccessibility of Bioactive Compounds	64
5.2.1	Micronutrient and Phytonutrient Bioavailability	64
5.2.2	Bioavailability of Minerals After HPP	65
	References.	66
6	Current Challenges and Future Applications of HPP	71
	References.	72
	Index	73

List of Figures

Fig. 1.1 HPP foods share of global market in 2015 and forecasted share in 2025. Continued growth is expected to accelerate 3

Fig. 1.2 HPP products in commercial markets around the world. (a) fruit juice, smoothie, dairy, and beverage products; (b) meat products; and (c) baby and infant food products 5

Fig. 1.3 (a) Working mechanism of HPP. (b) Working mechanism flow diagram of HPP 7

Fig. 1.4 Several types of HPP equipment (batch to continuous processing) 9

Fig. 1.5 Packaging of foods before HPP processing 10

Fig. 1.6 Different types of HPP food packaging 11

Fig. 2.1a Scanning electron microscope (SEM) micrographs of *E. coli* O157:H7. (a) Cells without HPP treatment; (b) cells treated with 400 MPa for 5 min; (c) HPP-treated samples for 6 h; (d) HPP-treated samples for 12 h; (e) HPP-treated samples for 18 h; and (f) HPP-treated samples for 24 h 24

Fig. 2.1b Transmission electron microscope (TEM) micrographs of *E. coli* O157:H7. (a) Cells without HPP treatment cells; (b) samples treated with HPP for 0 h at 400 MPa for 5 min; (c) samples treated with HPP for 6 h; (d) samples treated with HPP for 12 h; (e) samples treated with HPP for 18 h; and (f) samples treated with HPP for 24 h 24

Fig. 2.1c Scanning electron micrographs of *Listeria monocytogenes* processed at 200, 400, and 600 MPa for (a) 5 min and (b) 20 min 25

Fig. 3.1 HPP commercial natural beverages 33

Fig. 3.2 HPP commercial fruit and vegetable products 34

Fig. 3.3 HPP commercial meat products 36

Fig. 3.4 HPP commercial dairy products 39
