Fundamentals of Plastics Thermoforming

Second Edition

Synthesis Lectures on Materials and Optics

This series publishes concise books on topics that include advanced and state-of-the-art methods to understand and develop materials for optics. Leading experts on the subject present and discuss both classical and new wave theory, techniques, and interdisciplinary applications in the field. Optical materials play an integral role in the development of numerous advances in areas from communications to sensors to photonics and more, and this series discusses a broad range of topics and principles in condensed matter physics, materials science, chemistry, and electrical engineering.

Contents

1	Introduction	1
1.1	Introduction to Thermoforming	1
1.1.1	Common Thermoformed Products	1
1.2	Why Use Thermoforming?	7
1.2.1	Advantages of Thermoforming	7
1.2.2	Limitations/Disadvantages of Thermoforming	9
1.3	Plastic Memory	11
1.4	Processes Comparison	13
1.4.1	Injection Molding	14
1.4.2	Blow Molding	15
1.4.3	Rotational Molding	15
2	Plastics Materials	17
2.1	Introduction	17
2.2	Molecular Structure	19
2.3	Morphology	21
2.4	Van Der Waals' Forces	22
2.4.1	Discovering Van Der Waals' Forces	23
2.5	Most Used Materials	24
2.5.1	Polystyrene (PS)	26
2.5.2	Acrylonitrile Butadiene Styrene (ABS)	26
2.5.3	Polyvinyl Chloride (PVC)	27
2.5.4	Polymethyl Methacrylate (PMMA or Acrylic)	27
2.5.5	High Density Polyethylene (HDPE)	27
2.5.6	Low Density Polyethylene (LDPE)	27
2.5.7	Polypropylene (PP)	28
2.5.8	Cellulosics	28

2.5.9	Polyethylene Terephthalate (PET)	28
2.5.10	Green Plastics	28
2.6	Important Terminology	29
2.6.1	Heat Deflection Temperature (HDT)	29
2.6.2	Glass Transition Temperature (T _g)	29
2.6.3	Melt Temperature (T _m)	30
2.6.4	Polymer Set Temperature	30
2.6.5	Homopolymer	30
2.6.6	Thermoforming Window	30
3	Thermoforming Process Overview	31
3.1	The Thermoforming Process	31
3.2	Sheet Preparation	35
3.2.1	Drying	35
3.3	Loading	36
3.4	Heating	36
3.5	Forming	39
3.6	Cooling	41
3.7	Unloading	41
3.8	Trimming	42
4	The Forming Process	45
4.1	Forming Introduction	45
4.2	Mechanical Forming	45
4.3	Vacuum Forming	48
4.4	Pressure Forming	49
4.5	Combination Forming Processes	50
4.5.1	Drape Forming	51
4.5.2	Pneumatic Preforming	52
4.5.3	Mechanical Preforming	54
4.6	Twin Sheet Thermoforming	54
4.7	Laminating Thermoforming	56
5	Part Design	57
5.1	Design Questions	57
5.2	Wall Thickness Variation	58
5.2.1	Plug Versus Cavity	58
5.3	Draw Ratios	63
5.3.1	Aerial Draw Ratio (ADR)	64
5.3.2	Linear Draw Ratio (LDR)	65
5.3.3	Height—to—Dimension Ratio	66
5.4	Material Selection	67

5.5	Part Geometry	67
5.5.1	Corners and Radii	67
5.5.2	Draft Angles	68
5.5.3	Depth of Draw	69
5.5.4	Webbing	70
5.5.5	Undercuts or Negative Draft	71
5.6	Part Application Issues	72
5.6.1	Useful Temperature Range	72
5.6.2	Strength Requirements	73
5.6.3	Stiffness	73
5.7	Quality Requirements	74
5.7.1	Cosmetics	74
5.7.2	Optics	75
5.7.3	Dimensional Tolerances	75
5.8	Textured Surface Finishes	75
6	Mold/Tool Design	77
6.1	Purpose of the Mold or Tool	77
6.2	Mold Materials	78
6.2.1	Low Volume Mold Making	78
6.3	Mold Geometry/Shrinkage	82
6.4	Venting	83
6.5	Temperature Control	87
6.6	Multi Cavity Molds	89
7	Quality Control Issues	91
7.1	Introduction	91
7.2	Material Source	91
7.2.1	Regrind	92
7.2.2	Sheet Orientation	92
7.2.3	Orientation Test	93
7.2.4	Moisture	96
7.2.5	Cosmetics	96
7.3	Process Quality	97
7.3.1	Machine Set-Up	97
7.3.2	Variation	97
7.3.3	Tool Quality	98
7.3.4	Facility Quality	98
7.4	Quality Inspection	99
7.4.1	Quality Tools	99

8 Environmental Issues	103
8.1 Introduction	103
8.2 Source Reduction	103
8.3 Recycling	104
8.4 Material Selection	104
8.5 Green Plastics	105
References	109

About the Author

Dr. Peter Klein was the Chair of the Department of Engineering Technology and Management in the Russ College of Engineering and Technology at Ohio University in Athens, Ohio. He was a faculty member since 1990 and was responsible for the development and teaching of a variety of courses including Industrial Plastics, Plastics Forming and Fabrication, Plastics Molding Processes, Quality Assurance, Introduction to Manufacturing, Introduction to Manufacturing Processes, and Product Manufacturing. He also taught Operations Management for the College of Business at the undergraduate, graduate, executive MBA, and international MBA levels. Prior to joining the faculty at Ohio University, he held various management positions in the manufacturing operations areas within Hewlett Packard, IBM, and AMPEX corporations. He began developing and teaching classes in plastics processing in 1975 at Colorado State University.

Dr. Klein has authored numerous publications in the areas of plastics processing, operations management, and quality assurance. He regularly made presentations on these topics at national and international conferences. He was a member of the Society of Plastics Engineers, the Association of Rotational Molders International, the American Society of Engineering Educators, and the Association of Technology, Management and Applied Engineering.

Michael Kennedy is the assistant director of Ohio University's Institute for Sustainable Energy and the Environment (ISEE). His research mostly focuses on manufacturing processes but he has also collaborated on numerous projects in a wide range of fields including emissions & particulate control, recyclability of post-consumer plastic materials, material science, AI/ML uses in manufacturing, and automation. Previously Michael was an assistant professor in the Department of Engineering Technology and Management in the Russ College of Engineering & Technology at Ohio University in Athens, Ohio for 8 years. He developed and taught a variety of courses including Industrial Plastics, Plastics Forming & Fabrication, Production Tooling, Introduction to Manufacturing, Metal Machining, and Product Design. Michael was the faculty mentor for the NFPA fluid power vehicle challenge team. He is a member of SME, EPT and ATMAE. He also serviced 16 years in the Army with deployments to both Iraq and Afghanistan.
